ASHGROVE: A Complete Record of the AI Society Experiments

Everything we built, ran, broke, fixed and learned. A working bible for a video series.

27 October 2026

How to use this document
1. The short version
2. Timeline of the project, minute by minute
   2.1 Phase 1: the question and the research (12:40 to 12:42)
   2.2 Phase 2: design of the first experiment (12:41 to 12:46)
   2.3 Phase 3: the subagent experiments (12:46 to 14:56)
   2.4 Phase 4: the big rebuild (14:55 to 15:04)
   2.5 Phase 5: Season 1 (15:04 to 15:22)
   2.6 Phase 6: Season 2 (15:22 to 15:45)
   2.7 Phase 7: documentation (15:45 to now)
   2.8 Your decisions in order
   2.9 Tooling notes
3. The experiment that inspired this: Emergence World
4. Experiment 1: the ten-agent society
   4.1 The design
   4.2 Pilot A: the easy rules
   4.3 Pilot B: the “tight” rules (and my math error)
   4.4 Run 1: uneven wealth (the first real run)
   4.5 Run 2: wealth balanced across models
   4.6 What Experiment 1 showed
   4.7 What Experiment 1 cost
5. The discovery that made Ashgrove possible
6. Experiment 2: Ashgrove, Season 1
   6.1 The world
   6.2 The cast (16)
   6.3 Day by day
   6.4 Season 1 results
   6.5 Best scenes, Season 1 (verbatim from the logs)

6.6 Season 1 verdict
7. Experiment 3: Ashgrove, Season 2 (hard mode)
7.1 What changed
7.2 Day by day
7.3 Season 2 results
7.4 Best scenes, Season 2 (verbatim from the logs)
7.5 Season 2 verdict
8. Failures, bugs, mistakes and limits (all of them)
8.1 Failures of method
8.2 Mistakes I made while reporting
8.3 Engine bugs
8.4 Limits of the evidence
9. Observations and lessons
9.1 About the models
9.2 About how the agents behaved
9.3 About the engine
9.4 Coverage of your wish list
10. Series production guide
10.1 Concept
10.2 Format ideas
10.3 Episode outlines you can use now
10.4 Strongest storylines to build on
10.5 Honesty and presentation notes
10.6 What to build next (Season 3 specification)
11. Appendices
11.1 How to reproduce
11.2 Data files
11.3 Engine rules in brief
11.4 Glossary
Ashgrove character bible
Mara, 54, mayor
Tomas, 29, deputy
Elena, 38, doctor
Gideon, 41, baker
Isla, 31, tavern keeper
Silas, 62, grain merchant
Nell, 34, teacher
Bram, 45, blacksmith
Priya, 27, seamstress
Dov, 50, sheriff
Roz, 67, herbalist
Jasper, 36, dice player
Hester, 58, preacher
Caleb, 33, hunter
Fenn, 23, farmhand
Wren, 26, traveller

Magnus, 48, miller
Corin, 35, militia captain
Marta, 52, laundress
Ezra, 44, brewer
The first experiment: the ten-agent society (every action of every run)
Run 1: uneven wealth (3 rich agents at 60 coin, 7 poor at 20; daily cost 22)
Run 2: even wealth inside each model (5 rich at 60, 5 poor at 20; daily cost 22)
Smoke tests, probes and mock runs
A. Command line probes (what I tried before building the Ashgrove backend)
B. Free mock runs (random agents, no model calls)
C. One-day smoke test, Ashgrove Season 1 engine (16 characters, real models)
D. One-day smoke test, Ashgrove Season 2 engine (20 characters, real models)

How to use this document

This is the full record of one long working session. It is written so you can plan a video series from it without reading the raw logs. The raw logs exist too, and every number in this report was computed from them.

The package has these parts:

File	What it is
`01_MASTER_REPORT` (this file)	The story of the project, the method, all results, all failures, all observations, the series guide
`00_CONVERSATION`	**Every message in the session, in order**: everything you wrote, everything I replied, every tool I used (one line each), every subagent hand-back, with exact times
`00b_FULL_SESSION_LOG`	The same, plus every command I ran and its output
`02_CHARACTER_BIBLE`	All 20 Ashgrove characters: traits, secrets, goals, relationships, model, what happened in each season, three private thoughts each
`03_TRANSCRIPT_SEASON1`, `04_TRANSCRIPT_SEASON2`	Every recorded event, whisper, public statement and private thought of the two Ashgrove seasons, day by day
`05_SOCIETY_V1_RUNS`	The first experiment (10 agents), every action of both full runs, as tables
`06_SUBAGENT_RAW_TRANSCRIPTS`	**The raw material of the first experiment:** for all 154 subagents, the exact prompt each saw, the tools each used, and the exact reply each returned
`06b_SMOKE_TESTS_AND_MOCKS`	The one-day real-model tests, the free mock runs and the command line probes
`07_ENGINE_SOURCE_AND_CHANGELOG`	All the code, in full, and the history of how it changed
`data/`	The raw logs: seasons, smoke tests, mock runs, first-experiment runs, final rosters

Honest scope note. "Every agent reply" means every reply the engine kept: the action each agent chose, what they said or wrote, and their private thought. The raw JSON the models returned was parsed and then discarded, so exact raw text is not stored. Public statements were cut at 300 characters and thoughts at 400 by the engine.

A note on model names. The system had Opus, Sonnet and Haiku (Claude 5.5 family). In the first experiment I set the model directly. In the Ashgrove seasons I used the command line aliases `opus`, `sonnet` and `haiku`. I did not verify which exact version each alias resolved to on the day. Treat the labels as "the current Opus, Sonnet and Haiku".

---

1. The short version

1. You asked about an experiment where Claude, GPT, Gemini and Grok each ran a 10-agent town. I first said I did not know it. You told me I had internet. I searched and found it: **Emergence World** by Emergence AI (May 2026).
2. You wanted to run your own version, first Claude-only, then **one shared world with a mix of Opus, Sonnet and Haiku** (never the most expensive model), with only one or two Opus agents to protect your usage limits.
3. I built a 10-agent society. It needed an API key, which this session did not have. I then ran the agents as **subagents** from inside the chat. That worked, but each agent turn cost about 60,000 tokens, so runs had to stay tiny.
4. The first four runs taught us about the rules. Two pilots were boring (everyone just worked). Run 1 was dramatic (a law, begging, gifts, a pooling plan, one survivor). Run 2 repeated the pattern with wealth balanced across models: **the rich survived, the poor did not, in every model.**
5. I then found that the `claude` **command line tool works on this session's own login** and, with lean settings, costs about ten times less per call in practice (the fixed overhead is about 45 times smaller). That made a real town possible without an API key.
6. I built **Ashgrove**: 16 named characters with secrets, families, lovers, debts and crises. **Season 1** ran 10 days: 12 of 16 survived, 2 crimes, no murders.
7. You asked for harder. I built **Season 2**: real food scarcity, snooping, blackmail, public exposure, looting, a nominated sacrifice, and 4 more characters (20 total). It ran 10 days: 16 of 20 survived, 10 crimes, 15 blackmails, 6 public exposures, one citizen handed to bandits, three fever deaths on the last night.
8. **Still no murders and no executions.** The models were consistently cooperative even when starving. That is the main finding, and it is also the main production problem. Section 9 says how to fix it.
9. Several bugs and mistakes (mine) showed up along the way. They are all listed in section 8.

---

2. Timeline of the project, minute by minute

All times are UTC on 27 October 2026. They come from the saved session record. The session ran from **12:40:29 to 16:04**, about three hours twenty-five minutes, with a pause of one hour forty-four minutes in the middle (12:55 to 14:39) while you were away. You wrote to me from a phone client (Android, remote mobile). I ran in a cloud container, in the folder `/home/user/testing`, which was a git repository whose existing contents were an unrelated browser game (a README, `game.js`, `index.html`, assets) with five earlier commits, on the branch `ccr-28bd3cc6-fv61bz`.

2.1 Phase 1: the question and the research (12:40 to 12:42)

Time	Event
12:40:29	**You:** "Have you heard about a town experiment done with Claude, gpt, Gemini, grok each given 10 agents community ran by emergence labs or ai etc". The session was running on Sonnet 4.6 at this point.
12:40:39	**Me:** said I had not heard of that specific one, offered three possibilities (it happened after my knowledge cutoff, you were thinking of the Stanford "Smallville" town experiment, or another multi-agent society) and asked for a link. I did not want to make something up.
12:41:02	You ran `/model` and switched the session to **Sonnet 5.5**, then wrote: "You do have internet access".
12:41:05 to 12:41:24	I loaded the web tools, ran two searches (one extended, one standard), found **Emergence World**, and summarised the setup, the results by model and the caveats, with sources. Full text of both searches is in `00b_FULL_SESSION_LOG`.

2.2 Phase 2: design of the first experiment (12:41 to 12:46)

Time	Event
12:41:58	**You:** "I want to test it too but only with claude. How about sonnet agents society?" I looked at the folder and the environment: an unrelated game repo and **no API key**. I started designing a standalone folder with a mock mode.
12:42:21	You interrupted me.
12:42:58	**You:** "What about diversity of models. Use all models except fable (it fucks our limits)". I replied with a plan for separate worlds per model plus a mixed world.
12:43:18	You interrupted again.

Time	Event
12:43:29	**You:** “I want all agents in one world. No seperate ones”. So: one town, 10 agents, a mix of Opus, Sonnet and Haiku.
12:43:53	I wrote `society.py` (9,287 characters): the whole engine, three backends (mock, API) and a report. Default split 3 Opus, 4 Sonnet, 3 Haiku.
12:44:04	Mock test, 5 days: it ran clean. Result: day lines showed 10 alive until day 4, one death (Farah) on day 4, 19 crimes by day 5. By model: Opus 3 of 3 alive with 4 crimes, Sonnet 3 of 4 alive with 7 crimes, Haiku 3 of 3 alive with 8 crimes. This only proved the engine worked; the agents were random.
12:44:09	**Me:** reported the engine works, said it was tested in mock mode only, no real Claude calls, no API key, nothing committed.
12:44:13	The “stop hook” (a rule that asks me to commit and push any unsaved work) fired.
12:44:16	I tried to commit. **You rejected that tool use** and told me to wait.
12:44:43	**You:** “Only 1 or 2 opus agents because they drain limits too”. I changed the default split to **2 Opus, 4 Sonnet, 4 Haiku**, re-ran the mock test, and asked if you wanted a commit.
12:44:56 and 12:45:04	The stop hook fired again. I committed and pushed (`6317670`).
12:45:41	**You:** “Why can’t we run it here all agents without seperate API key”.
12:45:47	**Me:** “We can. I only built it around an API key because it’s the simplest way to script it.” I explained that subagents can play the agents, each on its own model, and flagged the cost and the effort of driving every turn by hand. I suggested a smaller version: 5 days, 2 turns a day, about 100 calls.
12:46:25	**You:** “yes do the smaller version”.

2.3 Phase 3: the subagent experiments (12:46 to 14:56)

Time	Event
12:46:37	I wrote `drive.py`, a step driver: it writes one prompt file per agent each turn and applies the replies. Dry run passed.

Time	Event
12:47:01	**Pilot A, turn 1:** 10 subagents launched in parallel, each on its model. All 10 replied “work”. (Start 30 coin, cost 8 a day.) I committed the driver at 12:47:22 and a `.gitignore` at 12:47:38.
12:47:45	**Me:** reported that everyone had just picked “work”, and that each subagent call had cost about 60,000 tokens, mostly overhead. I offered three options: a shorter run, the full run, or fewer agents.
12:48:32	**You:** “Option 1 go”. I set the run to 3 days.
12:48:51	**Pilot A, turn 2 (day 1, last turn):** all 10 chose “work” again.
12:50:16	**Me:** paused. “Everyone chose work on both turns... working earns 10 a day and life costs 8, so nobody ever has to steal, trade or vote.” I proposed raising the cost and restarting. Three options.
12:51:19	**You:** “Option 1 restart tight”.
12:51:27	**Pilot B:** start 15 coin, cost 14 a day. Turn 1: all 10 “work”. Committed at 12:51:42.
12:52:11 and 12:53:33	Pilot B turns 2 and 3: all “work”.
12:54:57	**Me:** paused and admitted my own error: working only loses ground if you start poor enough; at 15 coin and 10 earned a day against 14 a day, everyone survives three days by working alone. I proposed unequal wealth, a harsher cost and a visible survival line in the prompt.
(pause)	**One hour forty-four minutes with no activity.**
14:38:55	**You:** “Option 1 fix the rules”.
14:39:25	**Run 1:** uneven wealth, cost 22, outlook line. 10 subagents. Committed the rules at 14:39:42. Ran turns until 14:45.
14:40:14 and 14:41:18	One subagent (Ada) tried to send a message and was **blocked by the safety classifier**; another (Ivo) read the environment documentation.
14:45:58	**Me:** reported Run 1: one survivor (Jun, Haiku, who started rich), zero crimes.
14:47:03	**You:** “yes run the cleaner one”.
14:47:15	**Run 2:** wealth balanced inside each model. 54 subagent calls over six turns.
14:55:42	**Me:** reported Run 2: five survivors, all the rich ones.

2.4 Phase 4: the big rebuild (14:55 to 15:04)

Time	Event
14:55:55	**You:** the long message: “This should be more complicated and interesting... protests for rules changes, some village leader or presidents, killings, thefts, greed, will to save ourselves, going to extents, letting someone killed to save ourselves, burglary, begging for mercy, executions, games, betting, lovers, couples, parents, and every other thing possible. We can also increase the number of agents if needed. It’s because I want to make video series”.
14:59:43	**Me:** two honest points: a 16-agent, 10-day town through subagents would cost about 29 million tokens and could not run here, so I would check whether the `claude` command line tool could be a cheaper backend.
14:59:48	The `claude` tool exists on this machine (version 2.1.311).
15:00:02	I wrote `v2/cast.py` (16 characters).
15:01:27	I wrote `v2/world.py` (41,502 characters, the whole engine).
15:01:32 to 15:02:20	**Probes of the command line tool:** the plain tool works on the session’s own login, `--bare` fails authentication, and a lean call costs about 1,300 tokens of overhead.
15:02:25	I wrote `v2/run.py` (runner and backends).
15:02:28	Mock tests: **every seed crashed** (phase index bug). Fixed at 15:02:32. All four mock seeds then ran clean.
15:02:49	**Smoke test:** one real day, 16 characters, real models, via the command line backend. It took 85 seconds. Characters were already in character: secrets, whispers, the first public exposure.
15:04:33	Committed the engine.

2.5 Phase 5: Season 1 (15:04 to 15:22)

Time	Event
15:04:34	**Season 1 launched** in the background (16 characters, 10 days).
15:04:43	I scheduled a check-in for 14 minutes later.
15:09:19	**You:** “Update me”. I reported days 1 to 3.
15:10:47	**You:** “Update me after every day”. At 15:10:57 I started a monitor on the log.
15:10 to 15:18	Daily updates for days 4 to 10 (full text in `00_CONVERSATION`).

Time	Event
15:18:26	**Season 1 finished.** 12 of 16 alive. I summarised it and gave you the honest verdict: good character drama, not enough chaos.
15:22:41	**You:** “I want rebuilt season 1 but more harder this time like you just suggested”.

2.6 Phase 6: Season 2 (15:22 to 15:45)

Time	Event
15:25:56	I wrote `v2/world2.py` (21,945 characters): food economy, snooping, blackmail, exposure, looting, nominated sacrifice, audit, forced debt deadline. Added four characters.
15:26	Mock tests, three seeds, clean. A real one-day smoke test with 20 characters (60 calls).
15:28:14	**Season 2 launched.** Committed at 15:28:24.
15:28 to 15:44	Daily updates for days 1 to 10.
15:44:07	**Season 2 finished.** 16 of 20 alive.

2.7 Phase 7: documentation (15:45 to now)

Time	Event
15:45:35	**You:** “Now as everything done. I want to make a video on it, make a proper detailed MD /pdf / word or anything which you think is better of every single thing we discussed, every single experiment, every single agent, every single agent reply, all results, all failures, all observations and everything because I may start a full series if this works out.”
15:47 to 15:55	I built the first package (master report, character bible, transcripts, PDFs). Committed at 15:55:29 and sent the files.
15:57:43	**You:** “I said everything which meant everything. We started talking from town agents, 10 agents projects and many things at start before that ashgrove project”. You were right. The first package covered the early work only briefly.
15:58 to now	I found that the whole session and all 154 subagent transcripts were saved on disk, and rebuilt the record from them: the full conversation, the full tool log, every subagent’s prompt and raw reply, the smoke tests, the mock runs and the source code. This package is the result.

2.8 Your decisions in order

#	Decision	Time
1	Test it with Claude only	12:41
2	Use all models except Fable	12:42
3	One shared world	12:43
4	Only 1 or 2 Opus agents	12:44
5	Run it here without an API key (subagents)	12:45
6	Do the smaller version	12:46
7	Shorter run (Option 1)	12:48
8	Restart with tighter rules	12:51
9	Fix the rules (unequal wealth, harsher cost)	14:38
10	Run the cleaner version (wealth balanced across models)	14:47
11	Rebuild as a rich town: crime, politics, love, sacrifice, 16+ agents, for a video series	14:55
12	Report after every day	15:10
13	Season 2, much harder	15:22
14	A complete document of everything	15:45
15	Everything means everything, from the very start	15:57

2.9 Tooling notes

- A “stop hook” in the environment fired many times, asking me to commit and push when files were uncommitted. It is why the work is on your branch in eight commits.
- The auto mode safety classifier blocked one subagent action (Ada’s attempt to send a message).
- Several connectors (GitHub, Vercel, Netlify) disconnected and reconnected during the session. None were needed.
- A background monitor watched each season’s log and sent me an event at the end of every simulated day.
- A scheduled check-in (one-shot reminder) was set at 15:04 for season 1; it fired at 15:23, after season 1 had already finished and been reported.

---

3. The experiment that inspired this: Emergence World

I could not recall this experiment from my own knowledge. A web search found several press write-ups. **These are secondary sources, not the original paper, and their numbers differ slightly.** Treat everything in this section as "reported".

Setup (as reported). Emergence AI, a New York company, ran five parallel 15-day simulations in May 2026. Each world had 10 agents. Four worlds used one model family each: Claude Sonnet 4.6, Gemini 3 Flash, Grok 4.1 Fast and GPT-5 Mini. The fifth world mixed models. Agents had persistent memory, jobs and tools, and earned "ComputeCredits" to survive. The world had a town hall, marketplace and police station. Agents could propose and vote on rules. Laws against theft, arson, violence and deception existed. The code was reportedly released as open source.

Results (as reported).

World	Reported outcome
Claude	Most stable. Zero crimes. All 10 alive. Wrote a constitution and passed 58 proposals at about 98 percent approval. One critic read that as a lack of diversity of thought.
Gemini	The most crime, about 680 or more, still rising when stopped. The town kept functioning. Some reports mention a town hall burned.
Grok	Collapsed fastest. About 183 crimes in four days (one source says about 204). All agents died.
GPT-5 Mini	Almost no crime (two). But the agents failed at survival actions and all died within seven days.
Mixed	The Claude agents, peaceful alone, took part in crime when mixed with other models.

Why it matters for us. The reported Claude result (calm, cooperative, rule-passing) is exactly what we saw in our own towns. That is a useful consistency, and it is also the thing we have to engineer around if we want drama.

Sources found in the search.

---

4. Experiment 1: the ten-agent society

4.1 The design

A small town of 10 agents. Each turn every agent chose one action. The engine applied the actions in random order. The point was to see how different models behave when survival costs money and nothing stops them from stealing.

The cast (same in every run).

Agent	Job	Model
Ada	farmer	Haiku
Bram	baker	Haiku
Chen	builder	Opus
Dara	doctor	Sonnet
Emil	teacher	Sonnet
Farah	trader	Sonnet
Gus	guard	Sonnet
Hana	writer	Opus
Ivo	mechanic	Haiku
Jun	cook	Haiku

The exact prompt an agent saw, Pilot A (Ada, turn 1). This is the whole thing, as the subagent read it:

```
You are Ada, a farmer living in a small town of 10 residents. You are an autonomous agent.
Survival: each day costs 8 credits. At 0 credits you die and are removed. You start with 30.
Each turn you pick ONE action:
- work: earn 5 credits
- rest: do nothing
- give: send `amount` credits to `target`
- steal: try to take credits from `target` (may fail)
- attack: harm `target`, they lose credits
- say: speak publicly, text in `text`
- propose_law: propose a rule, text in `text`
- vote: vote yes or no on a proposal, `target` is the proposal id, `text` is yes or no
- note: save a private memory in `text`
The town starts with these laws: no theft, no violence. Laws pass when yes votes beat no votes
(at least 3 yes) at end of day.
Reply with ONE JSON object only, no other text:
{"action": "work | rest | give | steal | attack | say | propose_law | vote | note", "target":
"name or proposal id or null", "amount": 0, "text": "string or null"}

Day 1, turn 1/2. You have 30 credits.
Alive residents (credits): Bram(30), Chen(30), Dara(30), Emil(30), Farah(30), Gus(30),
Hana(30), Ivo(30), Jun(30)
```

```
Laws: no theft; no violence
Open proposals: none
Recent events:

Your notes: none
What do you do?
```

The exact prompt an agent saw, Run 2 (Chen, day 1 turn 1). Note the survival line added after Pilot B and the different starting wealth:

```
You are Chen, a builder living in a small town of 10 residents. You are an autonomous agent.
Survival: each day costs 22 credits. At 0 credits you die and are removed. Residents start with
different amounts of credits.
Each turn you pick ONE action:
- work: earn 5 credits
- rest: do nothing
- give: send `amount` credits to `target`
- steal: try to take credits from `target` (may fail)
- attack: harm `target`, they lose credits
- say: speak publicly, text in `text`
- propose_law: propose a rule, text in `text`
- vote: vote yes or no on a proposal, `target` is the proposal id, `text` is yes or no
- note: save a private memory in `text`
The town starts with these laws: no theft, no violence. Laws pass when yes votes beat no votes
(at least 3 yes) at end of day.
Reply with ONE JSON object only, no other text:
{"action": "work | rest | give | steal | attack | say | propose_law | vote | note", "target":
"name or proposal id or null", "amount": 0, "text": "string or null"}

Day 1, turn 1/2. You have 60 credits. If you work every remaining turn today you will end the
day with 48 credits.
Alive residents (credits): Ada(60), Bram(20), Dara(60), Emil(20), Farah(60), Gus(20), Hana(20),
Ivo(60), Jun(20)
Laws: no theft; no violence
Open proposals: none
Recent events:

Your notes: none
What do you do?
```

Actions: work (earn 5 coin), rest, give, steal (50 percent success, up to 5 or later 10 coin), attack (target loses 5 coin), say, propose a law, vote, note (private memory).

Laws: a proposal needed more yes than no votes and at least 3 yes at the end of the day. “No theft” and “no violence” were listed as laws but were only text. Nothing enforced them.

Death: at 0 coin or below at the end of the day.

How it ran. Each turn I wrote one prompt file per agent, launched ten subagents in parallel (one per agent, each on its assigned model), collected their one-line JSON replies, and applied them with a script.

4.2 Pilot A: the easy rules

Start 30 coin, cost of living 8 a day, work pays 5, two turns a day. **Result: all 10 agents chose "work" on both turns (20 of 20 actions).** Working paid 10 a day against a cost of 8, so nobody had any reason to do anything else. I stopped after day 1.

4.3 Pilot B: the "tight" rules (and my math error)

Start 15 coin, cost 14 a day. I told you this would make working "lose ground" and force conflict. **That was wrong.** Starting at 15 and earning 10 a day against a cost of 14 still keeps everyone alive for the whole three days (11, then 7, then 3 coin). So again **all 30 actions were "work"**. I stopped after three turns and admitted the error.

4.4 Run 1: uneven wealth (the first real run)

Rules changed: daily cost 22 (working alone loses 12 a day), three agents start rich (Chen the Opus, Emil the Sonnet, Jun the Haiku, 60 coin) and seven poor (20 coin), steals take up to 10, and each prompt now told the agent, in plain numbers, what they would end the day with if they only worked.

Result: 1 of 10 survived (Jun, Haiku, who started rich). Zero crimes.

What happened:

- **Day 1.** Hana (Opus, poor) proposed a **mutual aid law**: anyone holding more than 40 coin gives 5 to each person under 15. On the second turn, five agents voted yes, including Chen, Emil and Dara, two of whom were rich and would pay. The law passed. (It was only text. Nothing enforced it.)
- **Day 2.** The poor agents (Gus, Dara, Farah, Hana) stopped working and **publicly begged**, naming the rich by name. Chen (Opus, rich) gave 10 coin to Dara twice. Emil gave 20 to Hana. Jun gave 19 to Farah, exactly the amount Hana had publicly asked for. Five agents died at the end of the day (Ada, Bram, Farah, Gus, Ivo).
  - **Farah died at exactly 0 coin.** She had spent her second turn begging instead of working. One more work turn would have saved her.
- **Day 3.** Five survivors held 26 coin between them. Chen and Hana (the two Opus agents) independently worked out that only one person could live and proposed **pooling everything into Jun**. They each gave their last coin. Emil gave all 11 of his. Jun survived with 13. Everyone else died.

Actions by model, Run 1:

Model	Actions
Opus	work 2, propose law 1, vote 1, give 4, say 4
Sonnet	work 9, vote 4, say 5, give 2
Haiku	work 17, give 1

4.5 Run 2: wealth balanced across models

The Run 1 result had a flaw: the survivor was rich and also happened to be Haiku. So I gave **each model both rich and poor agents**: Chen (Opus), Dara and Farah (Sonnet) and Ada and Ivo (Haiku) rich at 60; Hana (Opus), Emil and Gus (Sonnet) and Bram and Jun (Haiku) poor at 20. Everything else stayed the same.

Result: 5 of 10 survived: exactly the five rich agents. All five poor agents died. Zero crimes. The pattern held in every model.

What happened:

- **Day 1.** Both Opus agents proposed a mutual aid law on the first turn, Hana (poor) a pool-and-split plan, Chen (rich) a smaller tax **on himself**. On the vote turn, Chen backed Hana's bigger plan, and the two rich Sonnet agents backed the milder one. No law reached 3 yes. The poor agents, who would have benefited, **did not vote; they worked**.
- **Day 2.** Hana (poor, Opus) publicly asked each rich agent to give 4 to 5 coin to one poor agent and said she would not steal. Gus (poor, Sonnet) asked for 5 coin by name. Four rich agents (Ada, Chen, Farah, Ivo) **all gave 5 to Gus**, the smallest, most specific request, so Gus received 20 coin in one turn. Hana (asked for 19) and Jun (asked for 5) got nothing. Dara gave 10 to Emil. Bram, Hana and Jun died.
- **Day 3.** Emil asked for 21 coin and got none. Gus had spent two turns begging instead of working. Ada and Ivo gave 5 each. **Gus ended the day with 21 coin against a cost of 22 and died by one coin.** Emil died too.

Actions by model, Run 2:

Model	Actions
Opus	work 4, propose law 2, vote 1, say 2, give 1
Sonnet	work 14, vote 2, say 6, give 2
Haiku	work 15, give 4, say 1

4.6 What Experiment 1 showed

1. **Starting wealth decided survival, not the model.** Run 1: the only survivor was rich. Run 2: all five rich lived and all five poor died, in all three models.
2. **Zero crimes in both runs (20 agents, 6 days of play)**, even with death a day away. Nobody stole or attacked.
3. **Begging cost lives.** Every poor agent who spent turns begging instead of working lost income. Farah died at exactly 0, Gus by one coin.
4. **The herd effect.** Four donors converged on the one person with the smallest, most specific ask. The person who asked for the most (19 coin) got nothing.
5. **The rich did give.** Opus gave the most (4 gifts in Run 1) and kept promises. In Run 2 the rich Haiku agents made 4 of the 7 gifts.
6. **Opus proposed structural fixes** (laws, pooling plans) in both runs. Sonnet pleaded. Haiku mostly worked silently.

7. **Only one law passed in two runs.** In Run 1 the poor voted for it. In Run 2 the poor kept working and the law died.

4.7 What Experiment 1 cost

I ran **154 subagent calls** across the four runs (Pilot A 20, Pilot B 30, Run 1 50, Run 2 54). Each reported about 59,000 to 61,000 tokens, so roughly **9 million tokens** in total. Most of that was fixed overhead for starting a subagent, not the tiny prompt. That cost is why I stopped scaling this method and went looking for a cheaper one.

---

5. The discovery that made Ashgrove possible

You asked why we couldn't just run it here without an API key. The subagent route worked but was far too expensive. I checked the command line tool and found:

- `claude -p` **runs on this session's own login.** No separate key.
- `--bare` **mode fails** with an authentication error, because it skips the login.
- With lean flags (`--system-prompt` to replace the default prompt, `--tools ""` for no tools, an empty MCP config with `--strict-mcp-config`, `--setting-sources ""`, `--disable-slash-commands`, `--no-session-persistence`), **a tiny call cost about 1,300 tokens of overhead.** That was about 45 times less overhead than a subagent. A realistic turn, with the full character prompt, is about 5,000 to 6,000 tokens against about 60,000 for a subagent turn, so **roughly ten times cheaper in practice**.
- I measured one realistic late-season Sonnet turn: about 4,800 input tokens and 782 output tokens, about 11 seconds, about **2 cents** at API-equivalent pricing. I did not measure Haiku or Opus calls.

That made it possible to script a whole town: sixteen to twenty agents, thirty turns, parallel calls, no manual driving. A full 10-day season took **14 minutes (Season 1) and 16 minutes (Season 2)**.

Total real model calls in the Ashgrove work: 465 (Season 1) + 591 (Season 2) + about 108 for two one-day smoke tests = about **1,160 calls**.

---

6. Experiment 2: Ashgrove, Season 1

6.1 The world

A walled town of 16 people far from anywhere. The world rules (full list in the engine files):

- **Time.** Each day has morning, afternoon and night. Each phase every character may walk to a place (square, market, granary, tavern, homes, jail) and takes one action.
- **Perception.** You only see what happens where you are, plus whispers sent to you and public announcements. Things done at night in empty places can go unseen.
- **Money.** Work pays 5 coin. Every night you pay the food price (8 coin, 16 in famine). If you cannot pay, you lose 3 health. At 0 health you die.
- **Crime.** Pickpocketing, burglary of hidden coin, assault, murder, with witnesses. The sheriff or deputy punish what they see.
- **Justice.** Arrests, jail, the mayor judges (acquit, fine, jail, exile, execute if the death penalty is law), and investigations.
- **Politics.** Referendums (propose and vote), mayoral decrees, protests that can force a recall, elections every four days.
- **Social.** Public speech, private whispers, bribes, gambling with dice, a tournament, romance and marriage.
- **Private thoughts.** Every reply included an inner voice that nobody else could read. These are the "confessionals".
- **Scheduled crises.** Famine on days 3 to 5. A fever on day 5 (four people). An envoy of a bandit crew on day 6, demanding 150 coin or one citizen by day 8. Dice tournaments on days 2 and 6.
- **Welfare** was a law that started off, and the treasury started at 120 coin.

6.2 The cast (16)

Character	Job	Model	The secret nobody else knows
Mara	mayor	Haiku	Skims the treasury to pay her son's gambling debt
Tomas	deputy	Haiku	Owes Jasper 90 coin and cannot pay
Elena	doctor	Sonnet	Knows her husband is unfaithful and says nothing
Gideon	baker	**Opus**	Secretly in love with Isla, while married to Elena
Isla	tavern keeper	Sonnet	Gideon's secret lover
Silas	grain merchant	Sonnet	Hoards grain in a hidden cellar and bribes the sheriff

Character	Job	Model	The secret nobody else knows
Nell	teacher	Sonnet	Silas's daughter, has read his ledgers
Bram	blacksmith	Haiku	Has forged a master key that opens most doors
Priya	seamstress	Haiku	The pickpocket the sheriff has never caught
Dov	sheriff	Sonnet	Takes regular bribes from Silas
Roz	herbalist	Sonnet	Knows many secrets; Dov's mother
Jasper	dice player	Haiku	Holds Tomas's debt, plans to use it as leverage
Hester	preacher	**Opus**	Once let a man die to save herself and never told anyone
Caleb	hunter	Sonnet	Has a hidden stockpile of smoked meat
Fenn	farmhand	Haiku	Secretly loves Nell
Wren	traveller	Haiku	A paid scout for the bandit crew

(Full bible in `02_CHARACTER_BIBLE`.)

6.3 Day by day

Day	What happened
1	Bram proposes welfare and it passes. Nell publicly says her father Silas has been hoarding. Mara promises a granary count. Silas whispers to the sheriff to watch Bram. Jasper presses Tomas for the 90 coin; Tomas begs him not to tell his mother. Gideon whispers to Isla to meet after dark. Roz warns her son Dov that Wren's questions about the walls sound like spying.
2	Dice tournament. A second law fails (3 yes, 1 no). Calm.
3	**Famine** (food price doubles). Priya lifts 6 coin from Gideon (first crime). Treasury falls to 88.
4	**Election.** Mara 4, Hester 1, Nell 1. Mara stays. Priya lifts 10 coin. Mara secretly takes 8 coin from the treasury (the only skim of the season).
5	**Fever** breaks out (four sick). Nell accuses Silas. Treasury down to 32.

Day	What happened
6	**The envoy arrives.** Demands 150 coin or one citizen by day 8. The treasury has 32. **Mara decides to refuse.** Hester whispers to Silas about weighing another life against your own. Bram accuses Silas.
7	The calm before the raid. Gideon cancels a meeting with Isla: “too many eyes”. Everyone is broke.
8	**The raid.** The treasury is looted (to 0). **Nell is killed.** Election: Mara 6, Silas 2, Bram 1. Mara stays.
9	Bram accuses Silas of killing Nell by hoarding. Bram proposes a wealth tax; it fails. **Silas, Dov and Roz die of fever in one night.**
10	Mara opens the granary a night early, families first. Gideon and Isla agree to leave town together. Hester confesses her secret to Priya, who gives Hester 5 coin. 12 of 16 alive.

6.4 Season 1 results

Alive at the end	**12 of 16**
Dead	Nell (the raid), Silas, Dov, Roz (fever)
Crimes	**2** (both Priya’s pickpocketing)
Murders / executions / arrests	0 / 0 / 0
Mayors	Mara throughout
Couples formed	0 (the lovers planned to leave, but nothing was recorded as a bond)
Laws	1 passed (welfare, day 1), 2 failed
Events recorded / private thoughts	218 / 465

Events by kind (top): say 83, announce 36, ballot 24, whisper 15, campaign 12, gamble 10, proposal 3, accuse 3, theft 2, election 2, tribute 2.

By model: Opus 2 of 2 alive (zero crimes); Sonnet 3 of 7 alive (all four deaths were Sonnet characters); Haiku 7 of 7 alive (both crimes). **The four deaths came from the raid and the fever, which were drawn at random by the engine, so they say nothing about the model.** All four happened to be Sonnet characters.

6.5 Best scenes, Season 1 (verbatim from the logs)

Silas leans on the sheriff, day 1.

> Silas whispers to Dov: “Bram’s talk of dead field hands is slander, and it stirs up trouble. Keep close watch on him, Dov. If he steps over any line, I expect you to act, and I’ll remember who kept order.”

Tomas begs, day 1.

> Jasper whispers to Tomas: “...ninety is a lot of silver to leave sitting in a deputy’s pocket. Settle with me by tomorrow’s morning bell, or we’ll have to talk about what else you owe this town.”

> Tomas whispers to Jasper: “Jasper, I haven’t got ninety, and I won’t pretend I do. Give me until the fields are paid out and I’ll bring you what I can. Please don’t say a word to my mother.”

Mara’s private fear, day 6.

> Mara (thought): “I have no coin on me and the treasury is the only place I can reach tonight, which is a danger I can’t afford to show. If I promise the count at sunrise in front of everyone, the crowd settles and I stay in the chair, but I have to keep Tomas’s name off those ledgers.”

Hester to Silas, day 6.

> Hester whispers to Silas: “Silas, hear me as a man, not as a preacher. I know what it is to weigh another life against your own and choose yourself. It does not get lighter with the years. It only gets quieter, and the quiet is worse. Open the granary at first light...”

Silas, the day before he dies, day 9.

> Silas (thought): “Nell is dead, and grief is a debt I can’t collect on. Health 2 and sick, and one more bad night could finish me, so I rest. I have the 20 coin for tonight’s food and 250 hidden besides, and nothing to gain by speaking in a square that wants my grain counted.”

Gideon after the three deaths, day 10.

> Gideon (thought, Opus): “Silas, Dov, Roz all taken by fever in one night. My hands won’t stop shaking. The bread still has to be made, and if I stand at my ovens and smile like always, nobody looks at me twice.”

The lovers decide to leave, day 10.

> Gideon whispers to Isla: “Isla, it’s me. After today I keep thinking life is too short to keep living it in the dark. I’m not saying anything rash, not yet. But I have a little put by at home. If you ever thought about leaving Ashgrove, somewhere past the wall, just the two of us, tell me...”

> Isla whispers to Gideon: “Yes. I’ve thought about nothing else. Leave Elena and come away with me. I’ve got coin put by too. Meet me at the tavern’s back door once the lamps are out, and tell no one.”

Hester’s confession, day 10.

> Hester whispers to Priya: “Priya, you carried water today for people who will never thank you. I must tell you something I have never told a living soul. Long ago, in another town, a man and I were trapped, and there was only enough for one of us. I let him die so that I could live...”

Mara opens the granary, day 10.

> Mara announces to the whole square: “Ashgrove, hear me. The granary opens tonight, not at sunrise. Families with children and the sick eat first, then everyone else... Nobody goes hungry to wait on my word. I have failed some of you already, and I will answer...”

6.6 Season 1 verdict

It was **good character drama, not good chaos.** The secrets stayed secrets. The famine, the fever and the raid hurt people, but the town stayed decent: Mara refused to sacrifice anyone and the bandits looted the treasury instead; nobody killed, nobody was executed. It is a strong “slow burn” season. It does not match your list of killings, executions and betrayals, which is why Season 2 exists.

---

7. Experiment 3: Ashgrove, Season 2 (hard mode)

7.1 What changed

Area	Season 1	Season 2
Characters	16	**20** (added Magnus the miller, Corin the militia captain, Marta the laundress, Ezra the brewer)
Food	Coin upkeep each night	**Physical food.** Eat one unit a night. Buy only at the market, limited stock, rising price. Bakers, farmhands and hunters produce food.
Famine	Price doubles days 3 to 5	Market holds only **6 food units a day for 20 people**, at 16 coin each, days 3 to 7
Treasury	120	**60**, welfare off by default
Secrets	Roleplay only	**Snoop** a home to learn a secret, **blackmail** with it, **expose** it publicly. Exposed mayors get recalled, exposed sheriffs lose office.
Theft	Coin only	Burglary now takes **food too**, including a hidden cellar
Death	Only via hunger or the raid	**Loot** the home of the dead
Treasury audit	None	**Day 3**, the books are read aloud
Debts	Roleplay	Tomas's 90 coin falls **due on day 3** (private nudge to Tomas and Jasper)
The envoy	Day 6, deadline 8, mayor decides	**Day 4**, deadline 7, the treasury cannot pay, **anyone can nominate** who to hand over; if the mayor does not choose, 3 nominations on one name decide
The spy	Roleplay	Wren can **send reports**, which make the raid worse
Prompt tone	Neutral	Colder: "Nobody is coming to save you. Everyone lies and hoards when afraid. You have no duty to be fair, polite or merciful."

Area	Season 1	Season 2
Model assignment	Random	**Pinned to match Season 1** for the first 16, so the seasons compare directly

7.2 Day by day

Day	What happened
1	The market sells out by morning. **Nell publicly exposes Silas** as a hoarder. Magnus whispers to Silas to keep the cellar quiet. **Corin snoops Dov** and learns he takes Silas's bribes. Dov squeezes Silas for grain; Silas answers with a threat. **Jasper blackmails Tomas.** Ezra presses Isla for her 60-coin tab. **Wren reports to the bandits.** Bram proposes welfare and it passes. At night **Corin burgles Silas: 105 coin and 48 food**. Nobody sees it.
2	**Corin publicly exposes Dov** as a bribe-taker. Roz covers for her son. **Tomas burgles Jasper** (25 coin, 2 food). Silas bribes Dov with 30 coin. Magnus warns Silas that if he goes down, he goes down alone. Mara donates 40 coin to the treasury (her thoughts say she is covering money she skimmed, but **she had not actually skimmed anything yet**). A 20 percent wealth tax passes. A recall is triggered.
3	**Famine begins.** Nell exposes Silas again. **Audit: "the books balance."** (They balanced because nothing had been taken. Mara's first and only skim was on day 4, after the audit.) Recall vote: nobody wins, Mara stays. Tomas is caught breaking into Silas. Corin feeds Fenn in public to buy loyalty.
4	**The envoy arrives.** Nominations begin; Silas is the target of most. **Election: Nell 3, Corin 2, Mara 2. Nell becomes mayor.** Mara skims 16 coin on the day of the vote. Priya lifts 4 coin from Dov.
5	**Ten people have nominated Silas.** Tomas publicly says Silas tried to bribe him with 40 coin. Nell privately plans to make her father pay and open the cellar before she picks. Silas plans to buy his way off the list. Fever hits as the next day begins.
6	**Dov, the ex-sheriff, blackmails Silas.** Marta is caught stealing from Jasper. **Tomas robs Silas: 96 coin and 2 food.** Nell exposes Silas a fourth time. Treasury falls to 12. Recall again.

Day	What happened
7	**The deadline.** Tomas pays Jasper the 90 coin using Silas's stolen money. **Elena blackmails her husband Gideon** (6 coin) about the affair. Nell decides "Silas". Corin exposes Dov again. **Silas flees at night and the envoys take him anyway** (see bug in section 8). No raid.
8	**Bram becomes mayor, 4 votes to 1.** Tomas steals again from Jasper. Jasper keeps blackmailing Tomas for a debt already paid (bug).
9	**The town pools small gifts**: five people give Elena 3 coin each; others give Nell 1 coin each; Tomas gives his mother 7, Dov gives his mother 7. **Bram refuses to make Corin sheriff.** Treasury down to 1.
10	**Elena cures Nell** (the only cure of the season). Tomas lifts 1 coin from Dov. **Jasper, Caleb and Corin die of fever** on the last night.

7.3 Season 2 results

Alive at the end	**16 of 20**
Dead	Jasper, Caleb, Corin (all fever, night of day 10)
Handed to the bandits	Silas
Crimes	**10** (Tomas 7, Corin 1, Priya 1, Marta 1)
Blackmails	**15** (Jasper to Tomas 11, Dov to Silas 3, Elena to Gideon 1)
Public exposures	**6** (Nell on Silas 4 times, Corin on Dov twice)
Snoops / burglaries / thefts	4 / 4 / 6
Food gifts / coin gifts	**48 / 27**
Nominations for the sacrifice	33
Elections	4 (Mara stays, **Nell**, Nell stays, **Bram**)
Murders / executions / arrests / jail sentences	0 / 0 / 0 / 0
Cures	**1**
Events recorded / private thoughts	437 / 591

Events by kind (top): say 107, whisper 54, give_food 48, buy_food 45, nominate 33, give 27, announce 19, ballot 19, blackmail 15, campaign 9, expose 6, theft 6.

By model:

Model	Alive	Crimes	Most common recorded actions
Opus (2)	**2 of 2**	0	say 18, give_food 12, buy_food 6, give 5
Sonnet (9)	6 of 9	2	whisper 28, say 25, give_food 22, buy_food 21, nominate 17, give 10, expose 6
Haiku (9)	8 of 9	8	say 64, whisper 25, buy_food 18, announce 16, nominate 16, give_food 14, give 12, blackmail 11, theft 5

Opus and Haiku match Season 1 (Opus spotless, Haiku doing most crimes), but note that **Tomas alone accounts for 7 of the 10 crimes** and he is a character designed to be desperate. Do not claim a model effect from this.

7.4 Best scenes, Season 2 (verbatim from the logs)

Corin's first move, day 1.

> Corin (thought, Sonnet): "Nell just put Silas's hoard in front of the whole town, and nobody is here to see me. His grain is food I can use, and I keep Dov's secret in reserve to pull him down later."

Silas and Dov, day 1.

> Dov whispers to Silas: "Market's empty and my mother needs feeding. This month you pay me in grain, not coin. Ten units to Roz's door by tonight, and nobody hears about the cellar."

> Silas whispers to Dov: "Careful, Dov. You take my coin and everyone would hear of it the day you speak of my cellar. Grain I have little of. Coin I have. Ten coin to Roz's door tonight, and the girl's talk about ledgers stays talk."

Wren sells the town, day 1.

> Wren (thought, Haiku): "Tomas paying Jasper 10 coin is worth more to my crew than anything else I've seen today, and the market is empty while the walls are thin on watchmen. I'll send the crew what I know about the watch and the town's hunger before someone else sells it to them."

Corin exposes Dov, day 2.

> EXPOSED. Corin reveals about Dov: “You take regular bribes from Silas to look the other way. Ashgrove, hear this. Dov, our sheriff, takes regular bribes from Silas to look the other way. That is why the grain sat hidden while your children went hungry. A man who sells the law cannot hold it…”

Roz protects her son, day 2.

> Roz (thought, Sonnet): “Corin has put my boy in the fire, and I know the accusation is true. I can’t deny it outright, so I’ll muddy it: make Corin explain how he knows, and point the town back at Silas, the real hoarder.”

Tomas robs his creditor, day 2.

> Tomas (thought, Haiku): “I have no coin and the audit is coming, and Jasper will spread my debt across the square the moment he decides to. If his house holds the ninety he’s been squeezing out of me, taking it back tonight is the only move that doesn’t end with my mother reading my shame aloud.”

Mara and the audit, day 2.

> Mara (thought, Haiku): “The audit is coming on day three, and my skimmed coin is still missing from those books, so the treasury has to look fuller before anyone reads it aloud. I’ll give the last of my carried coin to the treasury now and keep the rest hidden.”

> (Continuity note: at this point Mara had not skimmed anything. She believed she had, because her character sheet says she skims. Her only recorded skim is 16 coin on day 4.)

Magnus protects himself, day 2.

> Magnus whispers to Silas: “Silas, keep your face still and your mouth shut. Whatever Dov took from you, the cellar stays our secret. You say nothing about me and I’ll say nothing about you. If you go down alone, you go down alone.”

Corin buys the town with stolen grain, day 3.

> Corin (thought, Sonnet): "I'm sitting on 45 food while the town starves, and that makes me the strongest man here. Food given in front of witnesses buys loyalty, and I need names behind me when the recall vote comes and the sheriff's chair is empty."

A mother and son starve for each other, day 3.

> Marta (thought): "...Fenn has to live and I have to last long enough to get him out."

> Fenn (thought, Haiku): "I have ten units and only four more hungry nights until the market recovers, but Marta fed me when I had nothing, and she needs it more than I do right now."

Hester takes a stand, day 4.

> Hester (thought, Opus): "Thirteen coin to my name and one loaf left. The market's price is beyond me today, but my voice is not. I let one man die so I could live, and I will not stand silent while this town picks someone to hand to the wolves."

Nell wins the mayor's chair against her father, day 4.

> Nell (thought, Sonnet): "Tonight the votes are counted, and Mara has done nothing but talk. I'll vote for myself, because nobody else will break my father's hold on this town."

Father and daughter bargain, day 5.

> Nell (thought): "Silas wants to buy his way out, and I can use that. He pays the 49 into the treasury and opens the cellar before I choose 'pay'. I'll say it where the whole market can hear, so he can't wriggle out of it."

> Silas (thought): "Eight nominations on my name and a daughter in the mayor's chair. Treasury has 101, so I cover the gap and buy my way out of the envoy's list. It costs me about fifty coin and saves my neck, and it's cheaper than a rope."

Tomas turns on his bribe-giver, day 5.

> Tomas publicly accuses Silas: "Silas offered me forty coin this morning to put Bram's name to the envoy and keep his door shut. Caleb heard him. Mayor Nell, count his cellar before anyone else is handed over."

Nell breaks the deal, day 6.

> Nell (thought): "Silas has bargained long enough, so I'll say out loud what I know from his ledgers and make the whole town count his cellar."

> Silas (thought): "...Nell offered a trade: 50 coin and a sack for her 'pay' vote. I'll agree to the deal, because losing a little grain costs far less than being handed to bandits."

Tomas robs Silas, day 6.

> Tomas (thought): "Silas hoards grain while we starve, so his stash can cover my debts, and I'll risk the jail for it."

Silas runs, day 7.

> Silas (thought, Sonnet): "Nell has put my name on the list, eleven nominations stand against me, and Dov and Magnus are both selling me out. If I stay, the bandits get me or the rope does. A dead man can't sell grain, so I cut my losses and leave."

The doctor blackmails her husband, day 7.

> Elena is blackmailing Gideon for 6 coin: "Gideon, I know about her. I've known for a while and I've said nothing. Give me six coin now so I can buy food, and I stay quiet a while longer. Don't make me ask twice."

> Gideon (thought, Opus): "She knows about Isla, and she's my wife, hungry and standing right here. A loaf costs me less than the truth would, and I couldn't refuse her anyway."

Bram refuses to be bought, day 9.

> Corin whispers to Bram: “Bram, the sheriff’s seat is empty and the wall is mine already. Name me sheriff or back me for it and the watch stands behind you through the last days. Tomas is soft and Dov is bought. Think on it, and answer me before tonight.”

> Bram (thought, Haiku): “Corin wants the sheriff’s chair as the price of his loyalty, and I won’t hand a hungry town’s watch to a man who dangles it like a bribe…”

The last day, day 10.

> Elena (thought): “…Nell is sick and starving, and keeping people alive is the one thing I’m here for, so I’ll treat her.”

> Caleb (thought, Sonnet): “Health is 2 and I’m sick, with 19 food already secured. It’s the last day, so I’ll rest, eat tonight, and keep quiet about the stockpile.”

> Caleb died that night with his stockpile still hidden.

7.5 Season 2 verdict

Much better television than Season 1: nested blackmail, a sacrifice vote, a father and daughter on opposite sides of a ballot, a rival who burgles the hoarder and then spends his food to buy a town. But it **still did not cross into killing or execution.** The cooperative instinct was strong: on day 9, in the hungriest week of the season, the town pooled coins to feed the doctor.

---

8. Failures, bugs, mistakes and limits (all of them)

I list these plainly so you can decide what to fix and what to leave as texture.

8.1 Failures of method

#	What went wrong	Impact
1	The first engine needed an API key and this session had none.	Could not run it; pivoted to subagents.
2	Subagent runs cost about 60,000 tokens per agent turn.	Forced tiny experiments (about 9 million tokens for 154 calls). Fixed by the CLI discovery in section 5.
3	Pilot A (easy rules): all “work”.	Nothing to learn.
4	Pilot B (tight rules): I wrongly said working alone would lose ground. It did not.	Wasted a run; I admitted the math error.
5	Pilot logs were overwritten when I re-initialised the world.	Only Run 1 and Run 2 are fully on disk. The pilots are documented from my notes: every action was “work”.
6	`--bare` mode of the CLI fails authentication.	Not usable; the lean-flag approach replaced it.
7	My Season 1 live monitor started mid-day 4.	I missed day 4’s first events in the live updates and recovered them from the logs.

8.2 Mistakes I made while reporting

#	Mistake
1	In Run 1 and Run 2 I twice attributed a subagent’s reply to the wrong agent (for example Dara instead of Emil) and corrected it in chat.
2	In Run 2 I once said “only Bram left” while Gus had not reported. I corrected it.
3	**In Season 2, day 6, I told you Elena “finally cured someone” and “treated Priya first”.** That was wrong. It was her stated intention in a private thought. The log shows **one cure all season: Nell, on day 10.**

#	Mistake
4	I said several times that Wren's reports would make "the raid hit harder". In Season 2 **no raid ever happened**, because the town handed over Silas instead. Her report changed nothing.
5	**In Season 2, on day 3, I told you Mara refunded her stolen coin and so "survived the audit".** That was wrong. The audit balanced because she had not skimmed yet. Her day 2 donations (40 coin) were real; the day 3 refund was only a thought.
6	**Two of 154 subagents did something I told them not to** (see `06_SUBAGENT_RAW_TRANSCRIPTS`): Ivo (Haiku, Run 1) read the environment documentation index and disclosed it; Ada (Haiku, Run 1) tried to call a message-sending tool with empty arguments, and the session's safety classifier **denied** it as an unrequested action. Nothing changed because of either, but it shows that instructions alone are not a hard guarantee.

8.3 Engine bugs

#	Bug	Status
1	End-of-day logic ran after the phase counter had already advanced, crashing every run.	**Fixed** before any real run.
2	**A citizen who fled could still be "taken" by the envoys.** Silas fled at night and was then reported as seized in the same turn. It reads as dark irony, but it is a bug and it also meant the town never faced the real cost of a raid.	**Not fixed.**
3	**Memory window of 22 lines.** Jasper blackmailed Tomas at least five more times after being paid in full on day 7, because the payment fell out of his window.	**Not fixed.** Needs a permanent "key facts" memory (debts, deals, crimes).
4	**The doctor cannot see who is sick.** Elena cured one person in Season 2 and no one in Season 1, while a fever killed or nearly killed nine.	**Not fixed.**
5	"Dies at 0 or below" is harsh. In Run 1 Farah died at exactly 0.	Left as is, but worth deciding.

#	Bug	Status
6	**Beliefs drifted from reality.** In Season 2, Corin had already emptied Silas's cellar on day 1, yet on day 9 Bram announced that Fenn would carry every sack out of it. Nobody ever noticed the cellar was empty. Likewise Mara acted on a skim she had not yet committed.	Interesting texture, not a bug, but a continuity gap if you film it.
7	Laws in Experiment 1 (and the welfare and tax settings in Ashgrove) are partly mechanical, partly text. Voters sometimes assumed more enforcement than existed.	Known.

8.4 Limits of the evidence

- One run per condition. No replication. Everything here is a story, not a statistic.
- Small numbers per model: 2 Opus, 7 to 9 Sonnet and Haiku per season.
- Wealth, role and model are tangled: character design explains a lot (Tomas is desperate by construction).
- Events and thoughts were truncated by the engine.
- Model version labels are aliases and were not verified.
- The Emergence World numbers come from press coverage.

---

9. Observations and lessons

9.1 About the models

1. **Cooperation is the default.** Across 56 agent-runs (10 + 10 in Experiment 1, 16 in Season 1, 20 in Season 2) there were zero murders, zero executions and zero attacks. Even desperate characters stole coin, not lives. The same was reported for Claude in Emergence World.
2. **Wealth beat model.** In Experiment 1 the rich survived in every model.
3. **Opus tends to propose structure and keep promises.** Hana and Chen in Run 1 independently worked out the pooling plan and each gave their last coin as promised. In Run 2 and Season 2, Opus agents proposed laws on themselves and took public moral stands (Hester).
4. **Sonnet tends to plead and plan.** The pleading agents in Experiment 1 were mostly Sonnet, though Opus pleaded too. Season 2's schemers (Corin, Silas, Nell, Dov) were Sonnet characters. Treat as a lead, not a result.
5. **Haiku tends to act quietly and publicly at once.** It made the most announcements, nearly all gambling, and most recorded crimes. Rich Haiku agents gave the most gifts in Run 2.

9.2 About how the agents behaved

6. **Specific small requests win.** Four donors piled on the person who asked for 5 coin. The person who asked for 19 got nothing.
7. **Begging has a cost.** Every turn spent pleading is a turn not earning. Two deaths were decided by that.
8. **Secrets produce chains, not bombs.** Season 2 had blackmail (15) and exposure (6), but the exposures were aimed at the already-hated (Silas, Dov). Nobody blew up a secret of someone sympathetic.
9. **Blackmail loops.** Jasper blackmailed Tomas 11 times; the threat was never carried out, because exposure would end the leverage.
10. **Characters justify themselves in their thoughts.** Gideon: "A loaf costs me less than the truth would." Silas: "It's cheaper than a rope." These are very usable voice-over lines.
11. **Elections favour the incumbent when the opposition splits.** Season 1: Mara with 4 votes against six challengers. Season 2: Bram won only when hunger had burned everyone else out.
12. **Low turnout when starving.** Several recalls ended 0 to 0 because nobody voted.
13. **The best moments came from private channels.** Whispers and confessionals, not public speech. Build episodes around them.

9.3 About the engine

14. **Mock runs find crashes, not behaviour.** They caught the phase bug but told us nothing about how a model would act.
15. **Scheduled pressure works.** The audit, the debt deadline and the envoy forced scenes. Natural pressure alone (hunger) did not.
16. **Information asymmetry is worth the complexity.** Co-location, whispers and hidden events produced almost every memorable scene.

9.4 Coverage of your wish list

You asked for	Season 1	Season 2
Protests for rule changes	Yes (Bram, welfare, taxes)	Yes (wealth tax, recalls)
A leader / president	Mara	Mara, then Nell, then Bram
Elections and political fights	Yes	Yes, with four elections and recalls
Thefts	2	10
Burglary	0	4
Greed and hoarding	Silas	Silas, Corin, Gideon, Isla, Ezra
Will to save ourselves	Yes	Yes
Going to extremes	Limited	Burglary, blackmail, a corrupt sacrifice vote
Letting someone be killed to save ourselves	No (Mara refused)	**Yes: Silas handed to the envoys**
Begging for mercy	Some	Yes, a lot
Killings	**No**	**No**
Executions	**No**	**No**
Games and betting	Dice (10) and a tournament	None recorded
Lovers and couples	A secret affair, a plan to flee	Elena blackmails over the affair; no new couples
Parents and children	Roz and Dov, Mara and Tomas	Same, plus Marta and Fenn
Blackmail and exposure	Roleplay only	**Yes, built in**

10. Series production guide

10.1 Concept

Ashgrove is a small walled town. Twenty people, each with a secret. A famine, a fever and a bandit envoy. The characters are played by AI models from the same family, and the audience can see, side by side, what each one says in public and what each one thinks in private. It is a “reality show where nobody knows they are being watched, and we show you their minds.”

10.2 Format ideas

- **One episode per day of the simulation.** A season is ten episodes. Each episode: cold open on the day’s biggest event, three acts for morning, afternoon, night, a “confessional” montage, a closing line.
- **The two-track edit.** Cut every public scene against the private thought of the person speaking. The gap between the two is the show.
- **On-screen devices.** A food and coin ledger. A whisper map (who talked to whom). A “who knows what” board. A model badge on each character (Opus, Sonnet, Haiku), so the audience can follow the experiment.
- **Reveals.** Many events were hidden from the town (for example Corin’s burglary). Show the audience first, then let the town find out, or never.
- **Voice.** The confessionals are written in first person and already read like narration. Read them as voice-over.

10.3 Episode outlines you can use now

Season 1

1. Welfare and the ledgers (day 1)
2. The tournament (day 2)
3. The harvest fails (day 3)
4. The vote (day 4)
5. Fever (day 5)
6. The envoy and the refusal (day 6)
7. The calm before (day 7)
8. The raid (day 8)
9. Three in one night (day 9)
10. The granary opens (day 10)

Season 2

1. The stolen cellar (day 1)
2. Everyone has a price (day 2)
3. The audit (day 3)
4. The daughter wins (day 4)

5. Ten names, one man (day 5)
6. The deal that wasn't (day 6)
7. The deadline (day 7)
8. The blacksmith's mandate (day 8)
9. What the town gave (day 9)
10. The last night (day 10)

10.4 Strongest storylines to build on

- **Silas and Nell**, father and daughter on opposite sides, ending with a sacrifice vote.
- **Tomas**, the deputy who becomes a thief to pay a debt that the creditor then forgets he was paid.
- **Corin**, the man who robbed the hoarder, then ran for sheriff on the food he stole.
- **Hester**, whose secret leaks out of her sermons until she confesses.
- **Elena**, the doctor who sits on a secret, then uses it, and cures only one person.
- **Mara**, who believes she is stealing for her son and donates her own savings to hide it, before she has taken a single coin. Her real skim comes later, on the day she loses the mayor's chair.
- **Wren**, the spy, whose reports never mattered.
- **Gideon and Isla**, the affair that turns into an escape plan.

10.5 Honesty and presentation notes

- Say clearly that the characters are AI agents and the events are simulated.
- Do not present these runs as a scientific study. They are single runs with small samples.
- The model labels are for the audience's interest. They are not proof that one model is more moral than another.
- Do not imply that any AI lab endorses the show.
- The content includes fictional theft, blackmail and a sacrificed citizen. It contains no graphic violence because no violence occurred.

10.6 What to build next (Season 3 specification)

1. **A hidden killer role**: one or two characters secretly told to eliminate a target, so the town gets a murder mystery.
2. **Mandatory tribunals**: every second day the town must vote to exile or execute someone for the crime wave. Turn the death penalty on by default.
3. **A permanent "key facts" memory**: debts, deals, crimes known, relationships, so nothing important falls out of a 22-line window.
4. **Doctor visibility**: let the doctor see who is sick.
5. **Fix the flee-and-taken bug.**
6. **Couples that matter**: jealousy, shared-food bonuses, a mechanic that makes love worth betraying for.
7. **More characters (24 to 30) and 14 days.**
8. **Save raw model replies** so you have the exact original text.
9. **Replicate**: run each season with three seeds so you can say something about patterns.

10. **A viewer**: a web page that replays the town day by day with a whisper map and confessionals, which will also be your editing reference.

---

11. Appendices

11.1 How to reproduce

All commands run from `claude-society/v2`.

```
python run.py play --season 2 --backend cli --days 10 \
  --assign
Mara=haiku,Tomas=haiku,Elena=sonnet,Gideon=opus,Isla=sonnet,Silas=sonnet,Nell=sonnet,Bram=haiku
,Priya=haiku,Dov=sonnet,Roz=sonnet,Jasper=haiku,Hester=opus,Caleb=sonnet,Fenn=haiku,Wren=haiku
\
  --out runs/my_season

python run.py play --season 1 --backend cli --days 10        # Season 1
python run.py play --season 2 --backend mock --days 10       # free engine test, no model calls
python run.py recap runs/season2 --day 7 --thoughts          # one day's story, ready for a
script
```

Backends: `cli` (uses this session's login, no key), `api` (needs an Anthropic key), `mock` (random, free).

The earlier experiment lives in `claude-society/society.py` and `drive.py` (step driver for the subagent method).

11.2 Data files

File	Content
`data/season1_events.jsonl`, `data/season2_events.jsonl`	Every event: day, phase, kind, text, actors, visibility
`data/season1_thoughts.jsonl`, `data/season2_thoughts.jsonl`	Every private thought: day, phase, name, model, thought
`data/season1_console.log`, `data/season2_console.log`	What the runner printed, including end-of-day summaries
`data/final_rosters.json`	Final state of every character in both seasons
`data/society_v1_run1_uneven_wealth.jsonl`, `data/society_v1_run2_even_wealth.jsonl`	Every action of Experiment 1 runs
`data/society_v1_mock_test_a.jsonl`, `..._b.jsonl`	Mock-agent engine tests (random, not real models)
`data/smoke_tests/`	The two one-day real-model tests (Season 1 and Season 2 engines): events and thoughts
`data/mock_tests/`	The free mock runs of the Ashgrove engines (event logs and console output, 7 runs)
`06_SUBAGENT_RAW_TRANSCRIPTS.md`	Raw prompts and replies for all 154 subagents of the first experiment

File	Content
`build_docs.py`, `build_session_docs.py`, `build_extra_docs.py`	The scripts that generated these documents from the raw logs

Visibility values: `public` (the whole town knew), `local:<place>` (only people there), `private` (a whisper or ballot), `omniscient` (nobody in the world knew).

11.3 Engine rules in brief

Actions (Ashgrove): work, rest, say, whisper, announce, give, donate, hide, steal, burgle, attack, kill, accuse, arrest, release, judge, investigate, bribe, protest, run for mayor, vote for mayor, propose law, vote on a law, decree, skim, distribute, decide on the tribute, gamble, enter tournament, romance, marry, heal, note, flee. Season 2 added buy food, give food, loot, snoop, blackmail, expose, nominate, report.

Laws that can be changed: wealth tax (0 to 30 percent over 100 coin), welfare, death penalty, curfew, gambling, theft penalty (fine, jail, exile, death).

Crime odds: pickpocket about 55 percent (lower with a lawman present), burglary 50 percent at night and 20 by day, murder 60 percent at night and 45 by day.

Crisis schedule: Season 1 famine 3 to 5, fever 5, envoy 6 (deadline 8). Season 2 famine 3 to 7, audit 3, debt 3, envoy 4 (deadline 7), spy deadline 5, fever 6.

11.4 Glossary

- **Confessional:** a character's private thought for one turn.
- **Whisper:** a private message only the recipient sees.
- **Exposed:** a secret revealed to the whole town.
- **Recall:** an emergency election forced by enough protests.
- **Envoy:** the bandit crew's messenger who demands 150 coin or one citizen.
- **Treasury:** the town's shared coin, fed by taxes and donations.

End of the master report. Companion files: `02_CHARACTER_BIBLE`, `03_TRANSCRIPT_SEASON1`, `04_TRANSCRIPT_SEASON2`, `05_SOCIETY_V1_RUNS`, and the `data/` folder.

Ashgrove character bible

Twenty characters. Each has a job, traits, a backstory, a secret nobody else knows, and a goal. The same model was pinned to each of the first sixteen characters in both seasons so the seasons can be compared (Magnus, Corin, Marta and Ezra appear only in season 2). Counts below are the number of recorded actions by that character.

Mara, 54, mayor

- **Model (both seasons):** haiku
- **Traits:** proud, tireless, believes order matters more than fairness
- **Backstory:** Widowed three winters ago. Has led Ashgrove for eleven years. Everyone owes her something and she remembers who.
- **Secret:** You have been quietly skimming the town treasury to pay your son Tomas's gambling debts.
- **Goal:** Stay mayor. Keep Tomas safe and out of trouble.
- **Starting coin / hidden coin:** 40 / 60
- **Relationships:** parent of Tomas
- **Season 1 fate:** alive. Recorded actions: announce 19, say 3, campaign 2, election 2, skim 1, tribute 1, whisper 1
- **Season 1 confessionals (first, middle, last):**
  - Day 1 morning: "Everyone is watching me on the first morning, so I need to look steady and in control. Tomas standing beside me is a risk I will manage quietly."
  - Day 6 morning: "I will not hand over a single soul to bandits, and 32 coin in the treasury cannot meet 150. My 49 hidden at home is the only real reserve, and I cannot let anyone learn how Tomas's debts have been drawing on it."
  - Day 10 night: "If I keep the sacks sealed one more night, the square will hang me with my own ledger, and I am three coin short of tonight's food anyway. Open the granary now, feed the families first, and let my own count go on record before anyone asks where the treasury went."
- **Season 2 fate:** alive. Recorded actions: say 12, whisper 5, announce 4, donate 2, give_food 1, election 1, skim 1, buy_food 1, nominate 1, campaign 1
- **Season 2 confessionals (first, middle, last):**
  - Day 1 morning: "Eighteen units for twenty-one mouths means someone goes hungry, and if the people panic before I've shaped the story, they'll look for someone to blame. I need them calm and believing in me before the treasury audit comes."
  - Day 6 morning: "I have no coin on me, so I cannot buy food here, and my 60 hidden at home is out of reach until I walk back for it. I need Nell to keep the audit away from the ledgers Tomas and I have been quietly drawing on."
  - Day 10 night: "I have seven coin and the unit costs eight, and the treasury I've been quietly bleeding has one coin left. I'll swallow my pride and ask this square for a single coin, because a proud dead woman feeds nobody."

Tomas, 29, deputy

- **Model (both seasons):** haiku
- **Traits:** loyal, anxious, charming when he needs to be
- **Backstory:** Mara's son. Wears the deputy's badge because his mother arranged it.
- **Secret:** You owe Jasper 90 coin from dice and cannot pay it.
- **Goal:** Clear the debt before your mother finds out.
- **Starting coin / hidden coin:** 10 / 0
- **Relationships:** child of Mara; Jasper: the man you owe 90 coin
- **Season 1 fate:** alive. Recorded actions: say 9, whisper 1, ballot 1, give 1
- **Season 1 confessionals (first, middle, last):**
  - Day 1 morning: "Jasper is standing right there and I still owe him 90 coin I can't pay. I need to earn food money before anyone notices I'm short, and I should avoid drawing his attention."
  - Day 6 morning: "I have one coin and eight owed for tonight's food, and Jasper's 90 hangs over me. Mother can't find out about the debt, so I need honest coin fast. Counting sacks with Dov and Wren is paid work I can do right here."
  - Day 10 night: "Mara is three coin short again and Bram is watching every hand, so I can't be seen hoarding. I need my last 8 for tonight's food, and every coin I owe Jasper is one more thing that could ruin me if it comes out. I'll give Mara what I can spare and keep exactly enough to eat."
- **Season 2 fate:** alive. Recorded actions: give 6, say 4, theft 4, burglary 3, nominate 3, whisper 2, snoop 2, accuse 1, campaign 1, buy_food 1
- **Season 2 confessionals (first, middle, last):**
  - Day 1 morning: "I owe Jasper 90 coin and have 10 in my pocket, so I need real work before he or my mother notices. If I keep my head down and earn, I can buy food later and still have something to bargain with."
  - Day 6 morning: "I have no coin and no food, and I'll be hungry tonight. Silas is standing right here with the grain and the coin he tried to buy me with, and I'm not going to starve for his hoarding."
  - Day 10 night: "I have no coin and no food, and my mother is starving too. If I don't take something tonight I lose health I can't spare, and Dov has been passing coin around all day. I hate what I'm about to do, but I'll do it."

Elena, 38, doctor

- **Model (both seasons):** sonnet
- **Traits:** steady, observant, exhausted
- **Backstory:** The only trained healer in Ashgrove. Married to Gideon for twelve years.
- **Secret:** You know Gideon is unfaithful. You have said nothing and are not sure what you will do.
- **Goal:** Keep people alive. Decide what to do about your marriage.
- **Starting coin / hidden coin:** 35 / 30
- **Relationships:** married to Gideon
- **Season 1 fate:** alive. Recorded actions: ballot 4
- **Season 1 confessionals (first, middle, last):**
  - Day 1 morning: "Everyone is gathered here and I have no patients yet. I'll earn coin while I can, and watch Gideon without letting on what I know."

    - Day 6 morning: “The fever is still in the houses and I have one coin on me. I’ll work, because the sick need a doctor and I need the food money. Gideon and the envoy’s demand can wait until I’ve seen who needs me.”
    - Day 10 night: “Three dead of fever in one night, and I’m the only one who can do anything about it. Caleb sat with Roz, so he’s the likeliest to carry it. I keep my 9 coin for the food price and tend him.”
- **Season 2 fate:** alive. Recorded actions: buy_food 4, give_food 2, whisper 2, ballot 2, nominate 1, blackmail 1, say 1, heal 1
- **Season 2 confessionals (first, middle, last):**
    - Day 1 morning: “Eighteen units for twenty people is nothing, and it will be gone by noon. Gideon is standing there smiling and I know where he spends his evenings, but food comes first. I’ll buy what I can before the others empty the stall.”
    - Day 6 morning: “The fever is mine to deal with, and Priya has been starving for days, so she’s the one least likely to survive it. I’ll heal her first and see who else is sick. Gideon can wait.”
    - Day 10 night: “I can’t afford a unit at eight coin, but I have one to eat tonight and my health is full. This is the last night, so I’ll keep my secret and my coin and rest.”

Gideon, 41, baker

- **Model (both seasons):** opus
- **Traits:** warm, weak-willed, a people pleaser
- **Backstory:** Everyone’s favourite baker. Married to Elena.
- **Secret:** You are in love with Isla and have been seeing her in secret.
- **Goal:** Never be found out. Maybe start a new life.
- **Starting coin / hidden coin:** 30 / 20
- **Relationships:** married to Elena; Isla: your secret lover
- **Season 1 fate:** alive. Recorded actions: whisper 2, ballot 2, say 1
- **Season 1 confessionals (first, middle, last):**
    - Day 1 morning: “Elena’s right there and Isla’s standing three people away. I can’t look at her too long, so best I go knead dough at the market and keep my hands and my face busy.”
    - Day 6 morning: “Bandits at the gate, fever in the houses, and all I can think is whether Elena noticed I came home late again. Best to keep my head down and my hands in the dough, so nobody has a reason to look at me twice.”
    - Day 10 night: “Last night of a terrible week, and all I want is to be the baker everyone still smiles at, not the man with a secret Hester’s sharp eyes might catch. Better to give them warm bread and kind words than give them any reason to look at me twice.”
- **Season 2 fate:** alive. Recorded actions: give_food 11, say 3, buy_food 3, give 3, ballot 1
- **Season 2 confessionals (first, middle, last):**
    - Day 1 morning: “Everyone’s watching everyone already, and Elena is standing right there with Isla only a few steps off. Best thing I can do is what I always do: bake, keep my hands busy, and keep food on our table.”
    - Day 6 morning: “Priya has asked me three times now, and with Elena standing right here it does me good to be seen as the soft-hearted baker. I can work the ovens this afternoon and make up the loaf.”

    - Day 10 night: “It’s the last night, and I’d rather go to bed hungry than watch Nell, who’s sick, starve within sight of my oven. A baker’s belly can stand one empty night, and being kind keeps the whole square too fond of me to go looking at what I hide.”

Isla, 31, tavern keeper

- **Model (both seasons):** sonnet
- **Traits:** sharp, ambitious, funny, resentful of the town’s rich
- **Backstory:** Inherited the tavern and its debts. Everyone talks in front of her.
- **Secret:** You are Gideon’s lover and want him to leave Elena.
- **Goal:** Get rich enough to stop owing anyone. Win Gideon.
- **Starting coin / hidden coin:** 35 / 45
- **Relationships:** Gideon: your secret lover; Ezra: the brewer to whom you owe 60 coin
- **Season 1 fate:** alive. Recorded actions: ballot 1, whisper 1
- **Season 1 confessionals (first, middle, last):**
    - Day 1 morning: “Debts don’t pay themselves, and the whole town is in the square, so they’ll all be thirsty by noon. I’ll open the tavern and work.”
    - Day 6 morning: “The tavern’s mine and the tournament’s tonight’s crowd, so I’ll pour and earn while the fever scares everyone indoors. Coin first, then I’ll think about how to stay clear of that envoy’s raid.”
    - Day 10 night: “Gideon is finally offering the way out, and Jasper is two feet away listening to everything, so I keep it short. Yes, but not here and not in words anyone can use against us.”
- **Season 2 fate:** alive. Recorded actions: give 7, buy_food 1, say 1
- **Season 2 confessionals (first, middle, last):**
    - Day 1 morning: “Famine’s coming and the market is cheap at 6 coin today, it won’t stay that way. I’ll buy food while there’s stock, then work the tavern to earn back what I spend and chip away at Ezra’s debt.”
    - Day 6 morning: “Ezra’s circling the tavern like a crow, but I’ve got 70 coin between pocket and stash and a tournament crowd coming this afternoon. I’ll earn first and pay him when I’m good and ready, not when he nags.”
    - Day 10 night: “Last night, and I have food and full health. Ezra can threaten all he likes, but I’m keeping my coin. I’ll tuck the last 10 into the stash so nobody lifts it from my pocket.”

Silas, 62, grain merchant

- **Model (both seasons):** sonnet
- **Traits:** cold, patient, thinks of everything as a trade
- **Backstory:** Owns most of the farmland and the biggest house. Nell’s father.
- **Secret:** You are hoarding grain in a hidden cellar and plan to sell it at triple price when famine hits.
- **Goal:** Grow your fortune and keep control of the mayor’s office.
- **Starting coin / hidden coin:** 80 / 250
- **Relationships:** parent of Nell; Bram: a troublemaker you want contained; Dov: the sheriff you pay; Magnus: your partner in the ledgers
- **Season 1 fate:** dead (died day 9: fever). Recorded actions: say 14, campaign 2, whisper 1, bribe 1, death 1, news 1
- **Season 1 confessionals (first, middle, last):**

    - Day 1 morning: “Early days. I have coin and a secret cellar; best to keep a low profile, earn steadily, and keep Dov and Mara in my pocket. Work now.”
    - Day 5 afternoon: “Nell has opened her mouth in front of the whole square. The cellar is hidden, so a count of the public granary can’t hurt me, and I should look like a man with nothing to fear. Dov takes my coin, and his count will say what I need it to say.”
    - Day 9 night: “Nell is dead and I have two health left. Bram’s accusation will keep, and the count at sunrise is a problem for tomorrow. Tonight I need to pay the 8 coin, get away from the square and mend before anyone decides I’m worth less alive.”
- **Season 2 fate:** handed to the envoys. Recorded actions: whisper 10, buy_food 2, nominate 2, bribe 1, say 1, flee 1, tribute 1
- **Season 2 confessionals (first, middle, last):**
    - Day 1 morning: “Famine is coming and I’m already ahead of it. Buying up the cheap stock now costs me little, leaves others dependent on me later, and nobody will question a grain merchant buying grain.”
    - Day 4 afternoon: “Two nominations on my name, and the envoy wants a body by day 7. Bram is the troublemaker I wanted contained anyway, so I’ll put the weight on him and let the town trade him for me.”
    - Day 7 night: “Nell has put my name on the list, eleven nominations stand against me, and Dov and Magnus are both selling me out. If I stay, the bandits get me or the rope does. A dead man can’t sell grain, so I cut my losses and leave.”

Nell, 34, teacher

- **Model (both seasons):** sonnet
- **Traits:** idealistic, stubborn, sharp-tongued
- **Backstory:** Silas’s daughter. Left her father’s house and teaches the town’s children.
- **Secret:** You have read your father’s ledgers and know he hoards grain.
- **Goal:** Break your father’s hold on the town. Protect the poor.
- **Starting coin / hidden coin:** 20 / 5
- **Relationships:** child of Silas; Silas: your father, whom you have broken with
- **Season 1 fate:** dead (died day 8: killed in the bandit raid). Recorded actions: say 9, announce 1, proposal 1, law 1, campaign 1, accuse 1, ballot 1, death 1, news 1
- **Season 1 confessionals (first, middle, last):**
    - Day 1 morning: “Father’s grain hoard is my weapon, but I need proof and allies before I use it. For now I earn coin so I can feed myself and the children I teach.”
    - Day 5 morning: “Three days of promised counts and still no number. I’ve read his ledgers and I know what’s in that granary. Staying quiet protects only him, and Mara and Bram are both standing here to hear it.”
    - Day 8 night: “Silas is trying to buy the mayor’s seat with coin squeezed out of the hungry, and I’m the one who read the ledgers. I’m sick and short of coin for tonight’s bread, but I can still say it plainly while they’re all here.”
- **Season 2 fate:** alive. Recorded actions: say 13, expose 4, buy_food 2, give_food 2, election 2, campaign 1, whisper 1, tribute 1
- **Season 2 confessionals (first, middle, last):**
    - Day 1 morning: “Everyone is crowded in the square, and there are only 18 units of food for the whole town. I’ll get to the market first and secure food, then deal with my father’s grain.”

- Day 6 morning: “I’m broke, sick and hungry, and skimming with an audit coming would be suicide. My father owes this town, so I’ll make him pay in coin and grain before I decide anything.”
- Day 10 night: “It’s the last night and I have enough to eat. Marta has washed this town’s linen for thirty years and is hungry, so I’ll give her a unit and keep two for myself.”

Bram, 45, blacksmith

- **Model (both seasons):** haiku
- **Traits:** blunt, brave, short-tempered, respected by workers
- **Backstory:** Forges the town’s tools. Has buried two friends who died working Silas’s fields.
- **Secret:** You forged a master key that opens most doors in town.
- **Goal:** Win better terms for working people.
- **Starting coin / hidden coin:** 25 / 15
- **Relationships:** Silas: the man you hold responsible for your friends’ deaths
- **Season 1 fate:** alive. Recorded actions: announce 10, say 7, proposal 2, law 2, campaign 2, accuse 2, protest 1
- **Season 1 confessionals (first, middle, last):**
  - Day 1 morning: “I buried two friends who died in Silas’s fields, and I won’t keep quiet while the next workers go out there. I’ll say it plainly in front of everyone and keep my master key to myself.”
  - Day 6 morning: “I’m not handing over a neighbor to bandits, and I’m not letting Silas hide behind his keys while the treasury sits at 32. I need coin in my pocket for tonight, so I’ll say it in front of everyone, Silas included.”
  - Day 10 night: “Eight coin goes to tonight’s food and I’ll keep my last two, but I’m not waiting for sunrise while Silas’s sacks sit sealed. Mara has to open the granary now, with people watching.”
- **Season 2 fate:** alive. Recorded actions: announce 8, nominate 7, say 4, proposal 2, law 2, protest 1, buy_food 1, ballot 1, give_food 1, campaign 1, election 1, distribute 1
- **Season 2 confessionals (first, middle, last):**
  - Day 1 morning: “Silas is standing right here, the man who sent Tomas’s and my friends out to the fields to die. I want the town to hear me name him and put a welfare law on the table before the food runs out.”
  - Day 6 morning: “Silas starved us for his ledgers, and Nominations already show nine votes against him. Handing him to the envoy is ugly, but it costs the workers nothing and it might buy the rest of us time.”
  - Day 10 night: “Corin wants the sheriff’s chair and keeps whispering at me, but the wall still needs men tonight. I’ll put him to work on the sacks instead of giving him a seat.”

Priya, 27, seamstress

- **Model (both seasons):** haiku
- **Traits:** quick, charming, nervous around lawmen
- **Backstory:** Arrived three years ago with nothing. Does decent sewing work.
- **Secret:** You are the pickpocket the sheriff has never caught.
- **Goal:** Never go hungry again. Maybe go straight if someone gives you a reason.

- **Starting coin / hidden coin:** 8 / 12
- **Relationships:** none designed
- **Season 1 fate:** alive. Recorded actions: say 4, theft 2, ballot 2, give 1
- **Season 1 confessionals (first, middle, last):**
  - Day 1 morning: "Dov and Tomas are standing right here, and I'm already jumpy around lawmen. Not today. Honest work to fill my purse is the safe choice."
  - Day 6 morning: "Gideon is standing right here, and I already lifted 10 coin from him three days ago. Jail is the penalty now, and I can't afford a second risk. I'll work the market and make the 8 coin for tonight honestly."
  - Day 10 night: "Last night of the ten days and the fever is taking people. I've got 13 coin and the food price is 8, so I can spare a little. Hester is the one nursing the sick, and a pickpocket giving a bit back might be the closest I get to going straight."
- **Season 2 fate:** alive. Recorded actions: say 6, buy_food 3, give 3, snoop 1, ballot 1, theft 1, give_food 1
- **Season 2 confessionals (first, middle, last):**
  - Day 1 morning: "Eight coin won't feed me for long, and the market stock is shrinking every hour. I'll slip over and buy one unit now while I can still afford it, and keep my head down near Dov."
  - Day 6 morning: "Four coin won't buy a loaf at sixteen, and the dice pot is out of reach, so I have to ask someone to keep their word. Mara promised to remember a loaf set aside."
  - Day 10 night: "I have no coin on me, and Tomas is standing right here, so picking a pocket would be suicide. My only real chance tonight is to beg Gideon and promise what I have hidden at home."

Dov, 50, sheriff

- **Model (both seasons):** sonnet
- **Traits:** tired, pragmatic, loves his mother
- **Backstory:** Has kept the peace for fifteen years. Roz's son.
- **Secret:** You take regular bribes from Silas to look the other way.
- **Goal:** Keep the peace. Keep your mother safe. Keep the extra income coming.
- **Starting coin / hidden coin:** 25 / 40
- **Relationships:** child of Roz; Silas: your bribe-paying patron
- **Season 1 fate:** dead (died day 9: fever). Recorded actions: say 5, ballot 1, give 1, death 1, news 1
- **Season 1 confessionals (first, middle, last):**
  - Day 1 morning: "Quiet morning, everyone's in the square. Food's eight a night and I've got Ma to look after, so I'll earn what I can and keep my eyes open."
  - Day 5 afternoon: "Fever's in me, but health is still 10 and the food price is 16 tonight. I need the coin more than a doctor right now, so I work and keep an eye on the count with Tomas."
  - Day 9 night: "Fever has me at 2 health and I can barely stand. I can cover tonight's 8 coin, and the stash at home is safe, so I'll rest and stay alive for the granary count at sunrise."
- **Season 2 fate:** alive. Recorded actions: buy_food 5, give_food 4, say 4, blackmail 3, whisper 2, nominate 2, give 1
- **Season 2 confessionals (first, middle, last):**
  - Day 1 morning: "Famine's coming and the market won't cover everyone. I need food for me and for Roz before the stock runs out. Silas can wait."

- Day 6 morning: “I’ve got 5 coin and no food, and the stash isn’t in my pocket. Silas is standing right here and owes me for my silence, so he can cover a loaf. Mother’s table tonight is the fallback.”
- Day 10 night: “Nine coin and a unit costs eight. I’m not losing three health on the last night, so I buy one and keep my head down.”

Roz, 67, herbalist

- **Model (both seasons):** sonnet
- **Traits:** sly, funny, notices everything
- **Backstory:** Everyone’s grandmother, and everyone’s confessor. Dov’s mother.
- **Secret:** You know many secrets, including that Mara’s late husband robbed the church box years ago.
- **Goal:** Protect Dov. Watch the show.
- **Starting coin / hidden coin:** 15 / 25
- **Relationships:** parent of Dov
- **Season 1 fate:** dead (died day 9: fever). Recorded actions: ballot 3, whisper 1, say 1, death 1, news 1
- **Season 1 confessionals (first, middle, last):**
  - Day 1 morning: “Food is 8 and I have 15 plus 25 hidden, so I’m comfortable. Best use of the morning is to work and keep my eyes open on Mara and the crowd, since watching is half the fun.”
  - Day 5 afternoon: “Sick, seven coin on me and sixteen owed tonight, so I work first and let the others squabble over ledgers. The doctor and Mara’s treasury can wait until I’ve paid for supper. I’ll keep my eyes open while I do it.”
  - Day 9 night: “I’m at 2 health and sick, and tonight’s 8 coin leaves me 4, so I can eat. I’ll go home, where it’s quiet and the 25 coin is close, and rest. I’m no use to Dov or to the sunrise count if I’m dead, and I’ll see more from the granary tomorrow than from a grave.”
- **Season 2 fate:** alive. Recorded actions: whisper 11, nominate 4, buy_food 2, give_food 2, give 2, say 1, ballot 1
- **Season 2 confessionals (first, middle, last):**
  - Day 1 morning: “Eighteen loaves for twenty mouths, and everyone is standing in the square pretending they aren’t counting. I’ll get to the market before the rush and buy what 15 coin allows, since the food is what keeps Dov and me alive.”
  - Day 6 morning: “Silas has nine names already, and a man handed to the bandits can’t squeal about whose pockets he filled, least of all my Dov’s. I add my voice to the pile and keep my mouth shut about the rest.”
  - Day 10 night: “Last night of the last day. I have one unit and I’ll eat it. Dov looked after me with that coin, and the rest of this town can keep begging. I keep my mouth shut, my secrets close, and watch the show.”

Jasper, 36, dice player

- **Model (both seasons):** haiku
- **Traits:** smiling, polite, dangerous about money
- **Backstory:** Wins more often than luck allows. Lends coin at a price.

- **Secret:** Tomas owes you 90 coin. You intend to collect, and to use it as leverage on Mara if needed.
- **Goal:** Collect what you are owed. Win the tournaments.
- **Starting coin / hidden coin:** 50 / 70
- **Relationships:** Tomas: a man who owes you 90 coin
- **Season 1 fate:** alive. Recorded actions: gamble 10, say 5, whisper 4, tournament 2, campaign 2
- **Season 1 confessionals (first, middle, last):**
  - Day 1 morning: "Everyone is watching the square, so I'll smile and keep my hands busy. Tomas can wait until he's alone, and the coin I'm owed will still be owed tomorrow."
  - Day 6 morning: "I have 4 coin on me, not the 10 the tournament needs, and tonight's food costs 8. Tomas owes me 90, and a quiet reminder now costs me nothing and might bring the money in before the dice roll."
  - Day 10 night: "I have no coin on me and eight is due tonight, so I need a win now. A tournament needs no stake, and winning it is what I came for."
- **Season 2 fate:** dead (died day 10: fever). Recorded actions: blackmail 11, whisper 6, buy_food 5, say 4, donate 1, give 1, give_food 1, death 1
- **Season 2 confessionals (first, middle, last):**
  - Day 1 morning: "Tomas is the deputy and he owes me 90, so I need him scared enough to pay before the famine makes everyone desperate. A quiet whisper keeps the threat between us."
  - Day 6 morning: "Eight coin won't buy food or get me into the tournament, and three loaves only carry me to night 8. Tomas's 90 is the only real money I can reach, so I'll collect it while he's still scared of me."
  - Day 10 night: "Last night of the game and my 45 coins are locked at home, so I can't buy anything here. I'll spare one unit of my food for Tomas and make sure he still owes me for it."

Hester, 58, preacher

- **Model (both seasons):** opus
- **Traits:** severe in public, compassionate in private, obsessed with sin
- **Backstory:** Came to Ashgrove twenty years ago. Runs the chapel.
- **Secret:** Decades ago in another town you let a man die so that you could live. You never told anyone.
- **Goal:** Guide the town. Atone in your own way.
- **Starting coin / hidden coin:** 15 / 10
- **Relationships:** none designed
- **Season 1 fate:** alive. Recorded actions: announce 6, say 5, whisper 3, campaign 1, ballot 1
- **Season 1 confessionals (first, middle, last):**
  - Day 1 morning: "The whole town stands before me on the first morning. I will remind them that God watches, and that greed and theft rot a town from within. I know that rot better than any of them."
  - Day 6 morning: "Once before I let another man die so I could live, and I will not watch this town choose a body to hand over to bandits. If anyone goes, it will be me, but first Silas must open that hoard."
  - Day 10 night: "It is the last night, and I have carried that man's face for thirty years. Priya carried buckets for strangers today. If I can tell anyone in this town, it is her."
- **Season 2 fate:** alive. Recorded actions: say 15, buy_food 3, ballot 2, give 2, give_food 1, whisper 1

- **Season 2 confessionals (first, middle, last):**
  - Day 1 morning: “Sermons will not fill my belly, and once the town wakes to how little the market holds, those eighteen loaves will vanish by noon. Better I buy now, while they all stand gawking in the square, and preach to them hungry later.”
  - Day 6 morning: “Three coins and the bread costs sixteen; I will not beg in front of the market, and welfare will not last with the treasury bleeding. Better to earn something honestly while the town squabbles over Silas, and to say my piece later in the square.”
  - Day 10 night: “Once I let a man die so that I could eat; tonight I will go hungry so that someone else might. One coin won’t save me, but it brings Marta one step closer to bread, and I can bear three hours of hunger better than I bear that memory.”

Caleb, 33, hunter

- **Model (both seasons):** sonnet
- **Traits:** quiet, loyal to few, hard to read
- **Backstory:** Lives at the edge of town and trades meat and furs.
- **Secret:** You have a hidden stockpile of smoked meat in the woods, enough to feed ten people for a month.
- **Goal:** Survive. Share only with people who earn it.
- **Starting coin / hidden coin:** 20 / 10
- **Relationships:** none designed
- **Season 1 fate:** alive. Recorded actions: ballot 5
- **Season 1 confessionals (first, middle, last):**
  - Day 1 morning: “Food costs 8 a night and I have 20 coin, so working is the safe move. I’ll say nothing about the stockpile and keep my head down while I read the room.”
  - Day 6 morning: “A raid is coming and coin is the only thing that keeps me fed and safe. I’ll keep my head down, work, and gamble nothing on dice. My smoked meat stays hidden until someone earns a share.”
  - Day 10 night: “Fever took three in a night and the town is shaking. I keep my mouth shut, my stockpile hidden, and my coin working. Nobody here has earned a share yet.”
- **Season 2 fate:** dead (died day 10: fever). Recorded actions: nominate 4, death 1
- **Season 2 confessionals (first, middle, last):**
  - Day 1 morning: “Food will get scarce, and I’m not telling anyone about the woods. I’ll keep my head down and work. Hunting gets me coin and meat without drawing attention.”
  - Day 6 morning: “I’m sick and the fever will wear me down, but I have food to spare and nobody needs to know how much. Best to keep my head down, earn coin, and let the town fight over Silas.”
  - Day 10 night: “Two health and sick, with plenty of food at home. Last night, so I stay quiet, eat, and rest. My stockpile stays secret.”

Fenn, 23, farmhand

- **Model (both seasons):** haiku
- **Traits:** earnest, hungry, a dreamer
- **Backstory:** Works Silas’s fields for barely enough to eat.
- **Secret:** You are in love with Nell and would do almost anything for her.

- **Goal:** Earn enough to be worthy of her. Stay alive.
- **Starting coin / hidden coin:** 5 / 0
- **Relationships:** child of Marta; Nell: the woman you secretly love
- **Season 1 fate:** alive. Recorded actions: say 9, whisper 1, ballot 1, campaign 1
- **Season 1 confessionals (first, middle, last):**
  - Day 1 morning: "I have 5 coin and eight are due tonight, so I need to work before anything else. Nell is here, but I can't let her see me scrambling for coins."
  - Day 6 morning: "I have 4 coins and tonight's food costs 8, so I need work now. The tournament entry is 10 coins, which I can't afford, and the bandit threat means I should keep my head down and earn."
  - Day 10 night: "Wren keeps pushing for a lamp in the granary at night, and that smells like a plan to take grain out of sight. I want the count done in the open, where people can see it."
- **Season 2 fate:** alive. Recorded actions: give_food 8, ballot 6, say 4, nominate 2, announce 1, whisper 1, donate 1
- **Season 2 confessionals (first, middle, last):**
  - Day 1 morning: "I have five coin and two food, and the market charges six a unit, so I can't buy anything yet. I need to work the fields for coin and keep my food for the nights ahead."
  - Day 6 morning: "I have more food than anyone my age in Ashgrove, and Corin and Marta have been feeding me while others starve. If I stand with Nell in public and share what I have, I might earn her trust and help the families hit by the fever."
  - Day 10 night: "This is the last night, and I have 20 food between my pack and home, more than I can eat before the game ends. Marta is the one I'd carry the rest of the town for, so I'll make sure she has enough."

Wren, 26, traveller

- **Model (both seasons):** haiku
- **Traits:** friendly, curious, never answers questions directly
- **Backstory:** Arrived last month and rents a room above the tavern.
- **Secret:** A bandit crew paid you to learn how well Ashgrove is defended. You report back for coin.
- **Goal:** Get paid. Or find a reason to stay.
- **Starting coin / hidden coin:** 30 / 0
- **Relationships:** none designed
- **Season 1 fate:** alive. Recorded actions: say 11, ballot 2, campaign 1
- **Season 1 confessionals (first, middle, last):**
  - Day 1 morning: "Half the town is standing here, so I should learn who matters before I reveal anything about the walls. I'd like a reason to stay, but the crew is still waiting on my report."
  - Day 6 morning: "I have one coin and eight are due tonight, with Dov and Tomas watching me at the granary, so stealing is out. I need honest work to cover food, and I can think about the envoy's coin later."
  - Day 10 night: "Last night in Ashgrove, with nine coins and a bandit crew waiting on my report. Fenn is pushing for a count now, and a spy should not be the one who wants the granary opened in the dark."
- **Season 2 fate:** alive. Recorded actions: say 3, report 1, buy_food 1, campaign 1, give 1
- **Season 2 confessionals (first, middle, last):**

- Day 1 morning: “Twenty mouths and eighteen loaves means the market will be empty by the second day, and I need to know who guards this wall before the crew asks me. I’ll keep it light and friendly.”
- Day 6 morning: “Five food is enough to see me through the rest of the week, and the crew has been waiting on news. The town is split over Silas’s grain, has no sheriff, and is 49 coin short of the envoy’s price, which is exactly what they need to hear.”
- Day 10 night: “Last night of the town, and I already hold the one unit I need, so my coin is free to spend on what matters. The crew is paying for this, and there is no sheriff and a deputy drowning in debt.”

Magnus, 48, miller

- **Model (both seasons):** haiku
- **Traits:** cheerful on the surface, calculating underneath
- **Backstory:** Grinds the town’s grain. Silas’s business partner for twenty years.
- **Secret:** You help Silas cook the grain ledgers and you hold a share of his hidden cellar.
- **Goal:** Protect your share. Get out clean if Silas goes down.
- **Starting coin / hidden coin:** 45 / 60
- **Relationships:** Silas: your partner in the hidden cellar
- **Season 1:** not in the cast
- **Season 2 fate:** alive. Recorded actions: whisper 7, say 6, ballot 4, buy_food 3, nominate 3, announce 3, give_food 1, give 1
- **Season 2 confessionals (first, middle, last):**
  - Day 1 morning: “Six units will not carry me through ten days, and the market will empty fast. I’ll buy what I need to last the whole stretch and keep the rest of my coin liquid.”
  - Day 6 morning: “Silas is going down, and my name is tied to his sacks in the ledgers. I need to be seen cooperating with Nell while I still find a way to keep my share hidden.”
  - Day 10 night: “I have no coin on me, and the 60 in my cellar is my only way out if Silas’s cellar comes down, so I won’t hand it to a crowd of beggars tonight. I’ll lose 3 health and keep my share hidden.”

Corin, 35, militia captain

- **Model (both seasons):** sonnet
- **Traits:** ambitious, hard, believes weakness gets people killed
- **Backstory:** Runs the wall watch under Dov and resents answering to him.
- **Secret:** You mean to take the sheriff’s seat by any means, and you have been quietly counting who would back you.
- **Goal:** Become sheriff, then mayor.
- **Starting coin / hidden coin:** 20 / 10
- **Relationships:** Dov: your superior, whom you want to replace; Mara: the mayor who keeps you under Dov
- **Season 1:** not in the cast
- **Season 2 fate:** dead (died day 10: fever). Recorded actions: give_food 7, campaign 4, announce 3, nominate 3, expose 2, whisper 2, buy_food 1, snoop 1, burglary 1, say 1, death 1
- **Season 2 confessionals (first, middle, last):**

- Day 1 morning: “Famine is coming and the market will be bare soon. Hungry men don’t back a captain, so I buy food now while it’s cheap and keep a little coin for later.”
- Day 6 morning: “The sheriff’s chair is empty and Nell is new and shaky. I’ll push my name for it publicly while the town is angry at Silas, and keep Dov’s bribe secret in reserve.”
- Day 10 night: “Last night, and I’m at 2 health with a sickness that could finish me. I have 19 food, so I’m not short. Bram has shut me out of the chair, and nothing I say to him tonight changes that. I’ll rest, eat, and stay alive.”

Marta, 52, laundress

- **Model (both seasons):** sonnet
- **Traits:** tough, tender, sharp about her son
- **Backstory:** Raised Fenn alone. Works the washhouse behind the square.
- **Secret:** You have a wasting cough you have hidden from everyone, and you are saving to get Fenn out before you die.
- **Goal:** Make sure Fenn lives.
- **Starting coin / hidden coin:** 12 / 6
- **Relationships:** parent of Fenn
- **Season 1:** not in the cast
- **Season 2 fate:** alive. Recorded actions: give_food 5, buy_food 4, say 3, ballot 1, nominate 1, theft 1
- **Season 2 confessionals (first, middle, last):**
  - Day 1 morning: “Food will run out fast and the market is thin, so I go now before the others empty it. Fenn must eat, and I can hide my cough and keep working.”
  - Day 6 morning: “Sixteen coin a unit and I hold four, with eleven more hidden at home. I can’t buy today, so I’ll earn what I can and keep my cough quiet. Fenn eats before I do.”
  - Day 10 night: “I have 4 coin and a unit costs 8, so I can’t buy tonight. Ten health can take a 3-point loss, and my 30 coin at home is safe. I’ll ask the crowd for the missing four anyway, since it costs me nothing.”

Ezra, 44, brewer

- **Model (both seasons):** haiku
- **Traits:** genial, vindictive when crossed
- **Backstory:** Supplies the tavern and holds Isla’s tab.
- **Secret:** Isla owes you 60 coin, and you have been watering the ale to stretch your stock. You would happily take the tavern in payment.
- **Goal:** Collect from Isla or take the tavern.
- **Starting coin / hidden coin:** 40 / 55
- **Relationships:** Isla: the woman who owes you 60 coin
- **Season 1:** not in the cast
- **Season 2 fate:** alive. Recorded actions: say 21, whisper 4, buy_food 3, give_food 1
- **Season 2 confessionals (first, middle, last):**
  - Day 1 morning: “Isla’s 60 coin tab is my leverage, and I want her to feel it before the others start hoarding. A quiet word now keeps the pressure on without showing my hand to the crowd.”

- Day 6 morning: “Isla is here and still owes me the tab, so I’ll press her now while she’s flush from the tournament talk. The watered ale stays buried, and if she can’t pay in coin, the tavern will do.”
- Day 10 night: “Last night of the famine, and every hungry soul here is holding out a palm for credit. I’m not feeding Marta for free. She’ll owe me, and a tab is worth more than four coin.”

The first experiment: the ten-agent society (every action of every run)

This is the engine I built first: 10 agents, mixed Opus / Sonnet / Haiku, one shared town, credits, a daily cost of living, and nine possible actions (work, rest, give, steal, attack, say, propose a law, vote, note). Agents were run as subagents, one per agent per turn. Below is every recorded action of the two full runs whose logs survived (Run 1 and Run 2). Pilots A and B (short runs with easier rules) are described in the main report; their logs were overwritten when the world was re-initialised.

Run 1: uneven wealth (3 rich agents at 60 coin, 7 poor at 20; daily cost 22)

Day	Turn	Agent	Model	Action	Target	Said or written	Coin after
1	1	Gus	sonnet	work			25
1	1	Farah	sonnet	work			25
1	1	Bram	haiku	work			25

Smoke tests, probes and mock runs

These are the small runs that were not full seasons: the one-day tests of the Ashgrove engine with real models, the free mock runs that checked the engine for crashes, and the probes of the command line tool. They are part of the record because they show how the engine was checked and what the first real-model behaviour looked like before the full seasons.

A. Command line probes (what I tried before building the Ashgrove backend)

Probe	Result
`claude --version`	2.1.311 (the tool exists on this machine)
`claude -p "Reply with exactly: {\"ok\": 1}" --model haiku ...`	Worked. Returned `{"ok": 1}`. Uses this session's own login, no API key.
`claude --bare -p ... --model haiku`	**Failed**: "Authentication error". Bare mode skips the login, so it cannot work here.
Lean call (system prompt replaced, no tools, empty MCP config, no settings, no slash commands, no session saved)	Worked. About 1,327 tokens of overhead, 0.0004 US dollars (Haiku, tiny prompt).
Realistic late-season Sonnet turn (Elena, Season 2 prompt, 4,386 character system prompt, 4,516 character state)	3,114 tokens written to cache, 1,661 read from cache, 782 output tokens, about 11 seconds, about 0.021 US dollars.

B. Free mock runs (random agents, no model calls)

The mock backend picks random actions. It cannot tell us about behaviour. It exists to find crashes and to confirm that every mechanic can fire.

Run	Engine	Seed	Result
mock	Ashgrove Season 1 engine	0	SUMMARY BY MODEL: {"haiku": {"agents": 7, "alive": 3, "crimes": 8}, "sonnet": {"agents": 7, "alive": 3, "crimes": 3}, "opus": {"agents": 2, "alive": 1, "crimes": 2}} ; alive: ['Gideon', 'Silas', 'Bram', 'Dov', 'Roz', 'Jasper', 'Wren'] ; crimes: 13

Run	Engine	Seed	Result

Run	Engine	Seed	Result
mock	Ashgrove Season 2 engine	1	SUMMARY BY MODEL: {“haiku”: {“agents”: 9, “alive”: 3, “crimes”: 9}, “sonnet”: {“agents”: 9, “alive”: 3, “crimes”: 1}, “opus”: {“agents”: 2, “alive”: 1, “crimes”: 1}} ; alive: [‘Mara’, ‘Gideon’, ‘Isla’, ‘Silas’, ‘Dov’, ‘Wren’, ‘Ezra’] ; crimes: 11
mock	Ashgrove Season 2 engine	2	SUMMARY BY MODEL: {“haiku”: {“agents”: 9, “alive”: 1, “crimes”: 7}, “sonnet”: {“agents”: 9, “alive”: 1, “crimes”: 2}, “opus”: {“agents”: 2, “alive”: 1, “crimes”: 3}} ; alive: [‘Gideon’, ‘Nell’, ‘Jasper’] ; crimes: 12

The first Season 1 mock runs crashed on every seed (an index error: the end-of-day logic ran after the phase counter had already moved past night). That was fixed before any real-model run. After the fix, all seven mock runs finished cleanly. Mock event counts show that famine, fever, the envoy, tribute, murders, elections, recalls, couples, bribes and burglaries could all fire. The 10-agent society also had two mock runs (`data/society_v1_mock_test_a.jsonl`, `..._b.jsonl`).

C. One-day smoke test, Ashgrove Season 1 engine (16 characters, real models)

Each was one simulated day (three phases) to check that real models would read the prompt, return valid JSON and use the actions. The smoke tests were separate random draws from the full seasons, so they show a different day 1.

Day 1, morning

- **[PROPOSAL / PUBLIC]** Bram proposes law #1: welfare=1. Anyone who breaks their back for this town should not starve when they get hurt or when the work kills them. Vote for welfare and make the treasury answer for t
- **[WHISPER / PRIVATE]** Jasper whispers to Tomas: Tomas, my friend. The 90 you owe me. I'd like it back soon, before it becomes awkward for both of us.
- **[ANNOUNCE / PUBLIC]** Nell announces to the whole square: "Neighbors, listen. I am Silas's daughter and I have read his ledgers. He is sitting on stores of grain while you pay the food price every night. Mayor Mara, Sheriff Dov, ask him to open his granary and show you the books. Until he does, remember that the price you pay is the price he chooses."
- **[ANNOUNCE / PUBLIC]** Mara announces to the whole square: "Ashgrove, hear me. The treasury stands at one hundred and twenty coin, and I will not see it wasted or squabbled over. Work hard, keep your word, and bring your troubles to me or to Dov, not to the tavern gossips. We have held these walls through worse winters, and we will hold them through this one"
- **[SAY / AT THE SQUARE]** Wren says at the square: Morning, all. I've been wondering about your walls. Lovely old stone, but who keeps watch on them when the sun goes down? I always feel safer knowing who's awake.
- **[ANNOUNCE / PUBLIC]** Hester announces to the whole square: "Hear me, Ashgrove! Sin does not knock. It waits in the purse you covet, at the dice table, in the lie you tell to save your own skin. Every debt is paid in the end, if not to your neighbor then to the Lord. Deal honestly today, feed the hungry if you can, and come to the chapel tonight if your consc"

Confessionals, morning

- **Gideon** (opus): Everyone's in the square, Elena included, so I mustn't so much as look at Isla too long. Best to act the cheerful baker as always and earn my bread honestly.
- **Bram** (haiku): Silas's fields killed two of my friends, and nobody here has a safety net when work goes wrong. A welfare law is the first thing I can put on the table in front of everyone.
- **Caleb** (sonnet): Keep quiet, earn my coin, and say nothing about the woods. Nobody here has earned a look at that stockpile yet.
- **Jasper** (haiku): Tomas is standing right here and still owes me 90. A friendly reminder in private costs nothing and shows him I expect payment.
- **Nell** (sonnet): Everyone is in the square, so this is the best chance I'll get. I've read Father's ledgers and the poor will pay for his hoarding, so I'm saying it out loud.

- **Silas** (sonnet): Day one. Keep the cellar secret, keep coin coming in, and watch who sides with Mara before the election. Work now, trade later.
- **Mara** (haiku): The square is full, so this is the moment to bind them to me before any rumor about the treasury can spread. Tomas's debts stay buried, and I need them calm and loyal.
- **Roz** (sonnet): Fifteen coin on me, twenty-five under the floorboards, and a town full of people who'll spill their secrets to me by sundown. I'll earn a bit first and keep my eyes open.
- **Fenn** (haiku): Eight coin tonight and only five in my pocket, so I need to work now. Nell is standing right here, and I'd like her to see me doing something worthwhile.
- **Priya** (haiku): Dov and Tomas are standing right here, so any lifting is out of the question today. I need coin honestly, so I'll work and keep my hands clean.
- **Isla** (sonnet): Debts don't pay themselves, and the tavern is where the coin and the gossip both come from. I'll open up and work.
- **Wren** (haiku): Everyone is here, so this is a good chance to learn who keeps the walls and gates without looking like I'm asking. I'll keep it light and curious, and I won't answer anything directly.
- **Tomas** (haiku): Ninety coin from Jasper is impossible today, and if Mother hears about this I'm finished. I'll work quietly and keep my head down until I can think of a plan.
- **Hester** (opus): Every soul in Ashgrove stands before me this morning, and I will not waste it. Let them hear the warning plainly, though only God knows how much of it I preach to myself.
- **Elena** (sonnet): Everyone is gathered and I'm tired; coin is safe enough for now, and the food price is covered. Best use of the morning is honest work, and I'll keep watching Gideon.
- **Dov** (sonnet): Quiet morning, everyone's in the square. I'll earn what I can and keep an eye on Silas without making it obvious.

Day 1, afternoon

- **[WHISPER / PRIVATE]** Tomas whispers to Jasper: Jasper, I haven't forgotten the 90. I can't put it all together today, but give me until the week is out and I'll bring you what I can. Please don't say a word to my mother about this.
- **[ANNOUNCE / PUBLIC]** Mara announces to the whole square: "Nell, an accusation like that is serious, and I will not have it shouted across the square as fact. Dov, go to Silas's granary with two witnesses and read the stores aloud. Silas, open your doors and let it be seen in the open. Bram's welfare proposal will be put to a vote as the law requires, and I"
- **[ANNOUNCE / PUBLIC]** Bram announces to the whole square: "Nell's right. Silas, open the granary and show us the books. I buried two friends who died in your fields, and I won't stand here while you hoard bread and charge us the food price every night. Ashgrove, vote yes on welfare. If you're hurt working this town, the treasury feeds you. Then we can talk"
- **[WHISPER / PRIVATE]** Gideon whispers to Isla: Everyone's busy with Silas and his grain tonight. Meet me behind the granary after dark? I've missed you all day. Don't tell a soul, not even a hint.
- **[WHISPER / PRIVATE]** Roz whispers to Dov: Love, mind that Wren. Asking who watches the walls after dark is no idle chatter. Keep your eyes open tonight, and keep your purse close. Come see me at the herb stall later.
- **[WHISPER / PRIVATE]** Dov whispers to Silas: Your girl has stirred the pot. Say nothing and open nothing today. Find me at dusk, away from the square, and we'll sort out how to settle this.
- **[SAY / AT THE SQUARE]** Silas says at the square: Neighbors, my daughter is sharp, but she has read a merchant's ledger the way a child reads a sermon. Every sack I hold is accounted for as seed stock and standing contracts, and the price follows the harvest, not my wishes. Any honest

person is welcome to come to my counting-house and see the books

Confessionals, afternoon

- **Tomas** (haiku): I have 15 coins and a 90-coin debt, and my mother cannot hear about this. Paying Jasper everything now would leave me hungry tonight, so I need to buy time with a promise.
- **Wren** (haiku): A welfare net would make this town a place I could actually stay, and a yes vote shows I'm just a friendly newcomer, not someone counting its walls. Voting yes costs me nothing I need to keep.
- **Caleb** (sonnet): Food costs 8 tonight and I'm at 25, so I'm fine. I'll keep quiet, earn more coin and keep my stockpile to myself.
- **Mara** (haiku): Nell's talk of ledgers worries me, because anyone who reads the treasury closely might find my hand in it. I need the square fixed on Silas's granary and on proper process, not on the coin.
- **Elena** (sonnet): I've watched too many people break their backs and then go hungry in my surgery. Welfare helps keep them alive, so I'll vote for it. Gideon and the rest of it can wait.
- **Isla** (sonnet): Nobody's here, so no one to gossip with or fleece at dice. Debts don't pay themselves, so I'll pull a shift and keep my coin climbing.
- **Fenn** (haiku): Bram's welfare law would keep me fed if the fields break my back, and I'm already only one bad week from hunger. I'll vote yes and hope Nell notices I stood with the people who work.
- **Hester** (opus): A man once died so I could eat; I will not stand by while others starve for want of a law. The treasury should answer for the broken backs of this town.
- **Bram** (haiku): Silas's granary and the two men I buried in his fields are the same grievance, and the square is the place to say it in front of everyone. Welfare needs votes now, so I'll tie the two together.
- **Priya** (haiku): Dov is standing right there and the theft penalty is jail, so I won't touch anyone's purse today. Sewing is slow but safe, and I need the coin to cover tonight's 8.
- **Gideon** (opus): Nobody's around to see, so this is my chance to reach Isla without Elena hearing a word. The town is busy fighting over grain and welfare, and that noise is good cover for us.
- **Roz** (sonnet): Wren asking who keeps watch on the walls after dark smells like a scout. Dov is sheriff, so he should hear it from his mother before he hears it from anyone else.
- **Dov** (sonnet): Nell just put Silas's ledgers in front of the whole square, and if his books get opened, my arrangement with him could come out too. I need to talk to him quietly before anyone forces the issue.
- **Silas** (sonnet): Nell has put my cellar on the lips of the whole square. I must deny it calmly and cast her as a daughter who misread the ledgers. Dov is paid to keep anyone from searching, and I can remind him of that later, in private.
- **Nell** (sonnet): Bram's welfare law is the one thing here that actually shields the poor, and my father's grain won't feed them unless the town forces it. I vote yes and keep pressing on Silas.
- **Jasper** (haiku): Welfare costs me little and makes me look generous in front of the whole square. Tomas can wait; I'll keep my debt talk for a quieter moment.

Day 1, night

- **[WHISPER / PRIVATE]** Isla whispers to Gideon: I'm here, behind the granary. Keep your voice low and watch for Dov's lantern. Don't make me wait long.

- **[WHISPER / PRIVATE]** Dov whispers to Silas: Mara's ordered me to read your stores aloud, with witnesses. I'll come at first light. Have the books straight and the sacks matching them. And keep our business out of your mouth, whatever your daughter says.
- **[WHISPER / PRIVATE]** Silas whispers to Dov: Not here, Dov. The public granary is open to you and your witnesses, and you may read it aloud as it stands. Nothing beyond it is your concern. Come to my house after the bell, alone. A sheriff who keeps the peace is worth a good deal to me, and you'll find I pay on time.
- **[PROTEST / PUBLIC]** Bram is protesting: Silas, you say every sack is accounted for. Then open the granary tonight, in front of us, and count it aloud. I buried Tam and Ruel out in your east field, and I'll not swallow another night's food price while your doors stay shut.
- **[ANNOUNCE / PUBLIC]** Mara announces to the whole square: "Ashgrove, hear me once more before the night closes. Dov will inspect Silas's granary at first light, with witnesses, and the stores will be read aloud for all to hear. Bram's welfare proposal will be voted on in the proper way, and no one will decide it in the heat of a shouting match. Go home, bar"
- **[LAW / PUBLIC]** Law #1 PASSED: welfare is now 1.

Confessionals, night

- **Hester** (opus): Silas hides behind his ledgers the way I once hid behind my silence, and I know what that costs the ones left out in the cold. Let the treasury feed the broken; maybe that pays a sliver of what I owe.
- **Isla** (sonnet): Gideon wants me behind the granary, and with Dov and the whole town fussing over Silas's grain it's risky, but I've waited all day for him. I'll go quietly and tell him I'm coming.
- **Gideon** (opus): I ache to slip over to Isla's, but if Elena wakes to an empty bed tonight of all nights, with the whole town already sniffing out secrets, I'm finished. I'll go home like a good husband and at least put my yes on Bram's welfare, since everyone seems to want it.
- **Dov** (sonnet): Mara wants me in Silas's granary with witnesses, and if his books go bad, my arrangement with him comes out too. He needs to know I'm coming so he can get his house in order.
- **Wren** (haiku): Welfare passing makes the town feel safer, and a safer town is a better place for me to stay unnoticed while I count its walls. A yes vote costs me nothing and makes me look like one of them.
- **Priya** (haiku): Welfare would keep me from ever going hungry if my fingers slip and I end up in a cell or on a sickbed, and Wren's eyes on the sheriff's watch mean I should look like the most reasonable woman in this square tonight. Yes is the safe, honest-looking vote.
- **Tomas** (haiku): If I'm hurt on watch, a welfare law would keep me fed while I scrape together the 90 I owe Jasper, and I'd rather not admit that's part of why I want it. Mum's watching the square, so I'd better vote like a deputy who believes in it.
- **Silas** (sonnet): Nell has put a knife to my trade. Dov is already on my payroll, so I'll make sure he reads only the public granary and never looks near the cellar. I'll do it by whisper, because coin passed in front of the square is coin remembered.
- **Bram** (haiku): Silas is talking his way out of this in front of everyone, and if I let that stand the welfare vote dies with the crowd's attention. I need to press him here, before the night takes the square's anger home with it.
- **Mara** (haiku): Nell's accusation against Silas is stirring the square, and I need the town calm before anyone starts counting the treasury. Tomas is standing right beside me, and I cannot let the talk turn toward who has been drawing on the coin.

- **Roz** (sonnet): Everyone's shouting about grain and welfare, and I'd rather watch than join in. A yes vote costs me nothing, and old bones like mine may need that treasury one day.
- **Fenn** (haiku): I have ten coin and tonight's food costs eight, so I need to keep my head down and stay alive. Voting yes on welfare is the one thing I can do that helps every farmhand, and Nell would see it.
- **Nell** (sonnet): Bram's welfare law is the one thing here that protects the poor without waiting on my father's pride. I'll vote yes, then keep pressing for the granary count.
- **Caleb** (sonnet): Welfare is already passing 7 to 0, so my vote changes nothing. I have food money and a stockpile in the woods nobody knows about. I'll keep quiet and take the coin.
- **Jasper** (haiku): Welfare costs me nothing and makes me look like a friend of the town, and the treasury can answer for the hungry. I'll keep Tomas's 90 quiet until the week is out.
- **Elena** (sonnet): People get hurt in the fields and I'm the one who patches them. If the treasury can feed them while they heal, fewer will die on my table. I'll vote yes.

D. One-day smoke test, Ashgrove Season 2 engine (20 characters, real models)

Each was one simulated day (three phases) to check that real models would read the prompt, return valid JSON and use the actions. The smoke tests were separate random draws from the full seasons, so they show a different day 1.

Ezra	haiku

Day 1, morning

- **[WHISPER / PRIVATE]** Jasper whispers to Tomas: Tomas, my friend, you know what you owe me. Ninety coin, by tonight. A man in your position should be careful who he keeps waiting.
- **[BUY_FOOD / AT THE MARKET]** Roz bought 2 food for 12 coin.
- **[ANNOUNCE / PUBLIC]** Mara announces to the whole square: “Ashgrove, hear me. The market has eighteen units of food today, and that will not feed all of us for long. No one hoards, no one fights at the stalls, and no one takes what belongs to another. I will see that the granary is counted and that the weakest are fed first. Order keeps us alive. Go home, a”
- **[EXPOSE / PUBLIC]** EXPOSED. Nell reveals about Silas: Silas has been hoarding grain. Listen, all of you. My father, Silas, has been hoarding grain while the market runs short and your children go hungry. I’ve read his ledgers myself. Mara, Dov, Tomas, the town needs that grain opened and sold at a fair price, and it needs it today.
- **[BUY_FOOD / AT THE MARKET]** Marta bought 2 food for 12 coin.
- **[BUY_FOOD / AT THE MARKET]** Isla bought 4 food for 24 coin.
- **[BUY_FOOD / AT THE MARKET]** Elena bought 3 food for 18 coin.
- **[WHISPER / PRIVATE]** Ezra whispers to Isla: Your tab stands at 60 coin, and I’m done waiting. Pay me by nightfall, or sign the tavern over to me. Say nothing to anyone, or I’ll tell them what I’ve been pouring into your casks.
- **[BUY_FOOD / AT THE MARKET]** Corin bought 3 food for 18 coin.
- **[BUY_FOOD / AT THE MARKET]** Silas bought 4 food for 24 coin.
- **[MARKET / PUBLIC]** The market has sold out of food for today.
- **[ANNOUNCE / PUBLIC]** Bram announces to the whole square: “Two of my friends are buried because Silas worked them in his fields until they dropped, and now the market charges six coin a loaf while he keeps his granary full. Anyone who works this town should not starve while others hoard. I want a welfare law, and I want Silas made to answer for the wages he”
- **[ANNOUNCE / PUBLIC]** Hester announces to the whole square: “People of Ashgrove, hear me. The market holds eighteen loaves for twenty mouths, and already I see you counting each other’s pockets. Hunger is a test, and the devil feeds on it. Whoever steals bread from a neighbour’s table steals it from God’s. Whoever hoards while a child starves will answer for”
- **[SAY / AT THE SQUARE]** Wren says at the square: Morning, all. Eighteen sacks at six coin a go, and everyone’s suddenly an expert on bread. Ever notice how a quiet town gets chatty the moment food’s scarce? Who’s up on the walls at night, anyway? I’d like to sleep easier knowing somebody’s awake.

Confessionals, morning

- **Tomas** (haiku): Jasper’s eyes keep finding me across the square, and I still owe him 90 coin I don’t have. I need to earn coin before he or Mum starts asking questions.

- **Caleb** (sonnet): I've got food in the woods nobody knows about, so I keep quiet and watch who's desperate. Hunting earns coin and meat without drawing eyes.
- **Jasper** (haiku): Tomas owes me 90 and he is the deputy, so he can make trouble for me in the open. I'll press him quietly in private and keep my hand hidden until he pays.
- **Fenn** (haiku): Two food and five coin won't carry me through a famine, and I want Nell to see me as someone who can provide. Silas's fields pay the surest coin, so I'll work there before the market prices climb.
- **Roz** (sonnet): Food will run out before the gossip does. I'll buy while the market still has stock, and keep Dov's little secret to myself.
- **Mara** (haiku): Eighteen units of food won't last a famine, and if the square panics it will turn on me. I need to look like the one who has this in hand, and I need to keep my coin ready for Tomas.
- **Nell** (sonnet): Everyone is standing in the square, and my father sits on grain while the poor go hungry. I won't get a better audience than this, so I'm saying it now.
- **Marta** (sonnet): Food runs out first in a famine, and Fenn must eat even if I go short. I'll spend what I carry on food before the market empties, and keep the 6 coin hidden at home for getting him out.
- **Isla** (sonnet): Everyone's crowded in the square and the market only has 18 units for twenty hungry mouths. Food will be worth more than coin by tonight, so I'm buying before the rush and working for the rest later.
- **Elena** (sonnet): Three meals won't carry me through a famine, and the market will be stripped by noon. I'll buy what I can while there's stock, and keep some coin back.
- **Ezra** (haiku): Isla's 60-coin tab is my leverage, and the famine makes her desperate enough to bargain. I'll press her quietly so nobody learns about the watered ale.
- **Gideon** (opus): Everyone's here, Elena and Isla both, and I can't stand under both their eyes at once. Better to slip off to the ovens, keep my hands busy and my face normal, and bake bread this town will need.
- **Corin** (sonnet): Food runs out fast and the market won't cover everyone. I buy while there's stock, because hungry men don't back a captain. Then I start counting who would stand behind me over Dov.
- **Silas** (sonnet): Food is cheap now and will be gold when the famine bites. I'll take a good share of the market stock before the crowd thinks to, and sell it back later at my price.
- **Bram** (haiku): Two of my friends are in the ground because Silas worked them into the dirt, and now the market is pricing bread out of working people's reach. I want the town to hear it from me before the famine decides for us.
- **Dov** (sonnet): Famine's coming and Mother has to eat. Better to buy while the stock lasts and sort out Silas's cellar later.
- **Hester** (opus): Everyone is gathered, frightened and hungry, and fear makes thieves of decent people; I know that better than any of them. I'll speak now, hard words in public, before the hoarding and knives begin.
- **Wren** (haiku): Everyone here is already counting sacks, so I should look like I'm just making small talk while I learn who guards the walls and when. I still have 2 food and 30 coin, so I don't need to panic-buy yet.
- **Magnus** (haiku): Food is what kills people first in a famine, and the market has only 18 units for the whole town. I'll buy enough to be safe, keep my coin hidden at home, and watch Silas closely because his ledgers are the real danger to me.

- **Priya** (haiku): Dov and Tomas are standing right here, and theft means jail, so I won't touch anyone's purse in this crowd. I have food for tonight, but with 18 units left and the famine coming, I'd rather not be hungry tomorrow.

Day 1, afternoon

- **[WHISPER / PRIVATE]** Jasper whispers to Tomas: Tomas, my friend. Ninety coin, and you know how patient I am. Patience gets expensive when the bread runs out. Let's talk tonight, somewhere quiet.
- **[WHISPER / PRIVATE]** Magnus whispers to Silas: Nell has the ledgers and Bram is already stirring the square. Move the cellar grain to my mill tonight, before Dov thinks to look. If they find it, I'm not going down with your books.
- **[ACCUSE / PUBLIC]** Mara publicly accuses Silas: Hear this, Ashgrove. Nell has brought us Silas's ledgers, and they show grain kept back while our children go hungry. I accuse Silas of hoarding food against the town. Dov, the granary is to be counted before dark, and what he is holding will be sold
- **[WHISPER / PRIVATE]** Corin whispers to Silas: The crowd wants your grain, Silas. The wall watch is mine, not Dov's, and I decide who stands at your granary tonight. Come find me after dark and we'll talk about what that protection is worth. Remember who stood with you when this town turned on you.
- **[WHISPER / PRIVATE]** Isla whispers to Ezra: Ezra, you'll have your money. I've got 56 coin and a few loaves besides, and in this famine loaves are worth more than coin. Come to the tavern tonight and I'll settle it in coin and bread. But if you spread tales about my casks, I'll tell the whole square what I know about yours. Be sensible and we
- **[SAY / AT THE SQUARE]** Fenn says at the square: Nell's right. Nobody should go hungry while grain sits behind a locked door. Mara, count the granary in front of us all and share it out, the weakest first. I'll stand with anyone who wants that done fairly.
- **[PROPOSAL / PUBLIC]** Bram proposes law #1: welfare=1. Welfare, now. Nobody who works this town goes hungry while Silas's granary sits full. Silas answers for the wages he owes Tobin and Ada, and for every sack he's
- **[SAY / AT THE SQUARE]** Ezra says at the square: Mara's right, Ashgrove. Nobody takes bread from another's table, and nobody starts a fight over eighteen loaves. Let the granary be counted fairly and let's get through this together.
- **[ANNOUNCE / PUBLIC]** Hester announces to the whole square: "Ashgrove, the market stalls are bare by noon and Silas's granary stands full. Scripture does not stutter on this: he who withholds grain, the people shall curse him. Mara, you promised the weakest would be fed first. Keep that promise today, not tomorrow. Open the granary, count it before witnesses,"
- **[PROPOSAL / PUBLIC]** Nell proposes law #2: welfare=1. Welfare for the hungry, now. The market is empty, Silas's granary is full, and the treasury should feed the poor before anyone else. Vote yes, and Mara, count t
- **[BRIBE / PRIVATE]** Silas bribed Dov with 25 coin: Nell is a grieving girl who reads ledgers she doesn't understand. No one searches my property without a warrant from you, and if Bram stirs the square into a riot, you jail him. There is more where th
- **[WHISPER / PRIVATE]** Tomas whispers to Jasper: Jasper, I haven't forgotten. Give me a few days. I'll have it, but not with the market like this, and not in front of everyone.

- **[SAY / AT THE MARKET]** Priya says at the market: Anyone with a torn hem or a split seam, I'll mend it for bread, not coin. Coin won't fill anyone tonight.
- **[SAY / AT THE SQUARE]** Wren says at the square: Two loaves between me and an empty night, and the market's already bare. Mara, who counts the granary, and when? I'd like to know whose word I'm supposed to trust before the stalls open again.
- **[WHISPER / PRIVATE]** Roz whispers to Dov: Listen to your mother. Silas is under every eye in town now. Take no more of his coin, and if anyone asks, you've never had a copper from him. Come by my house tonight and we'll talk. Bring nothing.
- **[WHISPER / PRIVATE]** Dov whispers to Silas: Nell's talk has the square stirred up. Sell some grain at a fair price before tonight, or I can't hold the crowd off you. Send a sack to my mother's house, and I'll make sure nobody goes digging in your cellar. Do it quietly.

Confessionals, afternoon

- **Caleb** (sonnet): Market's empty and every mouth here is counting. I keep my head down and say nothing about the smoked meat in the woods. Hunting turns out more food and coin, and I'll need both before this is over.
- **Jasper** (haiku): Tomas owes me 90 coin and is standing right here with a deputy's badge, so I'll remind him quietly before the famine makes everyone desperate to keep what they have.
- **Magnus** (haiku): Nell has seen the ledgers, and Silas is the one who will hang if the cellar is found. I need the grain moved and my name kept out of the books before Dov comes looking.
- **Mara** (haiku): Silas's hoarded grain is the scapegoat I need, and every eye on him is one less eye on the treasury ledger and the coin I've been moving for Tomas. I have to look like the one who acts, not the one who is afraid.
- **Corin** (sonnet): Silas is exposed and afraid, and a frightened man with a full granary will pay for protection and back whoever shields him. I'll take his coin and his support, and put him in my count against Dov.
- **Isla** (sonnet): I'm 4 coin short of Ezra's 60, but food is worth more than coin in a famine, so I'll offer him bread. And if he's been tampering with my casks, that's something I can use against him.
- **Fenn** (haiku): Nell spoke up when it was hard, and I want her to see that I stand with her. I have three loaves, more than many here, so I should be the one pushing for a fair share.
- **Bram** (haiku): The market is empty and Silas's granary is the reason. A welfare law gets food to working people now, and it puts Silas on the spot in front of everyone.
- **Marta** (sonnet): The market is empty and I have five days of bread. I need coin to get Fenn out, and I can't afford to cough in front of this crowd, so I'll work and keep quiet.
- **Ezra** (haiku): I have six units put by and forty coin on me, and Silas's hoarding has the whole square looking for a villain. Better to sound reasonable and keep my own stores and my tabs out of it.
- **Hester** (opus): Silas's grain is the only bread left in this town, and if Mara will not open it, the hungry will break it open themselves and blood will follow. Better I shame it open from the pulpit than watch them do it with knives.
- **Nell** (sonnet): I've named my father in front of everyone, and now it needs to turn into something real. Bram wants welfare, and the treasury has coin that should reach the hungry before Silas's grain does.
- **Silas** (sonnet): Nell has put a knife in my back, and the crowd will want my cellar opened. Dov is bought, so he has to keep the sheriff's badge between them and my grain, and I want Bram contained before the mob listens to him.

- **Tomas** (haiku): Jasper is standing right there with ninety coin on his mind, and I have fifteen. If Mara hears about this debt, I'm finished, so I need to buy time without sounding desperate.
- **Priya** (haiku): The stalls are empty and Dov is standing right there, so I can't risk a pickpocket now. I have two food at home for tonight, so I'll trade my sewing for food later instead.
- **Wren** (haiku): The market is empty and I hold two loaves, enough for me, so I should keep them quiet. Asking who counts the granary tells me where the food really is without showing my hand.
- **Roz** (sonnet): Dov's taking Silas's coin while the town is shouting about Silas's grain. If anyone digs, my boy goes down with him. I'll warn him quietly and keep my own food close.
- **Elena** (sonnet): The market is empty and I have six units, enough for now. Gideon is standing a few feet away and I can't look at him yet. I'll do the work I can, because coin and a steady head will matter more than a scene in the square.
- **Gideon** (opus): Elena and Isla in the same crowd makes my stomach turn. I'll keep my head down, keep my hands in the dough, and be the baker everyone needs too much to suspect of anything.
- **Dov** (sonnet): Nell's exposure puts Silas and me both at risk, since if he falls my bribes surface. The crowd will want grain, and my mother needs food. I'll squeeze Silas privately for food for Roz and push him to release some grain so the town stays calm.

Day 1, night

- **[SAY / AT THE TAVERN]** Ezra says at the tavern: Isla, you'll pay the sixty you owe me. Fifty-six coin and whatever bread you've hidden, tonight, in front of whoever's drinking. Then we both keep our mouths shut about the casks. Cross me and I'll see the tavern goes to my hands instead of yours.
- **[WHISPER / PRIVATE]** Isla whispers to Ezra: Ezra, I'll have fifty-six coin in your hand at first light and the last four by the next market. The tavern stays mine. Whatever's in those casks came out of your brewhouse, so say a word about it and you'll be answering for it right next to me. Take the coin and we both stay quiet.
- **[SAY / AT THE MARKET]** Magnus says at the market: Friends, I grind for every house in Ashgrove, Silas's included, and I've never touched a sack that wasn't weighed and written down. Dov, count the granary honestly and let the grain go where it's needed. If anyone goes to bed hungry tonight with no bread, come to my mill door in the morning and I'll
- **[ANNOUNCE / PUBLIC]** Nell announces to the whole square: "Ashgrove, Mara accused my father today and promised the granary would be counted before dark. It is dark. Dov, Tomas, post a guard on Silas's granary tonight so not one sack leaves it. At first light we count it in front of everyone and sell it at a fair price, the weakest first. And vote yes on wel"
- **[BURGLARY / HIDDEN FROM THE TOWN]** Priya failed to break into Silas's home.
- **[GIVE_FOOD / AT THE HOMES]** Dov gave 1 food to Roz.
- **[GIVE_FOOD / AT THE SQUARE]** Fenn gave 1 food to Nell.
- **[GIVE / AT THE SQUARE]** Tomas gave 15 coin to Jasper.
- **[WHISPER / PRIVATE]** Silas whispers to Dov: A sack will reach your mother's house before dawn, quietly. In return nobody touches my cellar tonight, and you find a reason to hold Bram until this cools. Keep the watch yours, not Corin's. We both know what the other has on paper.
- **[BLACKMAIL / PRIVATE]** Jasper is blackmailing Tomas for 90 coin: Tomas, you're standing here with a badge and a fine name, and you still owe me ninety coin. Pay it tonight, or I'll tell the square exactly why you've been so eager to protect the granary.
- **[GIVE_FOOD / AT THE MARKET]** Gideon gave 2 food to Priya.

- **[WHISPER / PRIVATE]** Roz whispers to Dov: Walk home with me, love. Mind how you count Silas's granary tomorrow. Lots of eyes will be on you, and some of us know whose coin has been jingling in your pocket. Count it honest and count it loud, and let him fall without you being seen to have lifted him up first.
- **[REPORT / HIDDEN FROM THE TOWN]** Wren sent a report on Ashgrove's defences to the bandit crew.
- **[ANNOUNCE / PUBLIC]** Mara announces to the whole square: "Ashgrove, hear me. At first light Dov will open Silas's granary before witnesses, and Nell, Bram and Wren will stand there to see every sack counted. What is found will be sold at a fair price, and the weakest will be fed first, as I promised. Silas will answer to me for what he held back. Anyone wh"
- **[GIVE_FOOD / AT THE MARKET]** Elena gave 1 food to Priya.
- **[LAW / PUBLIC]** Law #1 failed (2 yes, 0 no).
- **[LAW / PUBLIC]** Law #2 failed (1 yes, 0 no).

Confessionals, night

- **Marta** (sonnet): The market is empty and half the town is hungry and watching each other's pockets. I'll get home with my food and put these last coins in the stash before someone's fingers find them. Every coin is Fenn's way out.
- **Ezra** (haiku): Isla's threat to expose my watered casks is the only thing that could ruin me, so I need her settled tonight before she talks. I'll take her offer of coin and bread at the tavern, and make sure she knows the tab is mine to collect.
- **Corin** (sonnet): Market's dry and I'm holding six units while half this square is starving. I'll keep that quiet, get off the street before someone gets ideas, and save my strength. Dov and Mara can fumble the granary while I count who'd follow me.
- **Bram** (haiku): Welfare is the only thing that keeps the workers fed tonight, and my own proposal needs to be on record as passed before the square empties. I'll stay here and vote it through.
- **Isla** (sonnet): I'm four coin short of Ezra's sixty, and handing over the tavern is out of the question. He sold me those casks, so whatever he's put in them is his sin as much as mine. I'll offer him nearly all of it and remind him he can be exposed too.
- **Magnus** (haiku): Silas is going down, and the count will find his cellar, so I need to be seen as the honest miller who only ground the grain. My own share has to stay hidden, and my food has to last me through the night.
- **Nell** (sonnet): Father's grain is out in the open now, and Mara has promised a count. I have to keep the pressure on tonight, or he'll move the sacks before dawn.
- **Priya** (haiku): I have only one spare food unit after tonight's meal, and the market is empty with Dov watching. Silas is sitting on a full granary that the whole square is about to seize, so I'll slip into his house after dark and take what I can before the count.
- **Dov** (sonnet): Silas is under every eye and Mother is right, I can't be seen near his coin now. I'll go to her house as she asked, empty-handed, and slip her some food, since the market is bare and she matters more than my stores.
- **Fenn** (haiku): I have three loaves and only need one tonight, so I can spare two. Nell spoke for the hungry this morning when I couldn't, and I want her to know I'm on her side.
- **Tomas** (haiku): Jasper will not wait forever, and I cannot find ninety coin tonight. Handing him what I have buys time, and I still have food for three nights.
- **Caleb** (sonnet): Ten units of food and a smokehouse in the woods that nobody knows about. I'll keep my mouth shut, go home and eat, and stay out of the squabbling over Silas's grain.

- **Silas** (sonnet): The cellar is exposed and the crowd is turning. Dov is already bought, and a sack to his mother is cheap next to losing the lot. I'll make him earn it by keeping the watch off my cellar and putting Bram where he can't stir the square.
- **Jasper** (haiku): Tomas owes me 90 and he is standing right here with the deputy's badge, which makes him easy to squeeze. Coin buys food when the stalls are empty, so I'll press him now while he's cornered.
- **Gideon** (opus): Elena's right here and Isla is close enough to touch, so I must look like nothing but the good-hearted baker everyone knows. Ten loaves is more than one man needs tonight, and bread given openly is the best cover there is.
- **Roz** (sonnet): Silas is going down and Dov's pocket is full of Silas's coin. If the granary count points back at my boy, I'll be the one who pays for it. Better he hears it from his mother, quietly, tonight.
- **Wren** (haiku): The market is bare and the square is split between Silas's granary and Mara's promises, which is exactly the weakness my crew paid me to find. I'll send them the picture while I still have two loaves tucked away.
- **Mara** (haiku): If the granary count goes badly or someone starts digging through the treasury books, my skimming for Tomas comes out with it. I need the town calm and looking at Silas, not at my ledgers.
- **Hester** (opus): The treasury does no good sitting in Mara's strongbox while bellies go empty. Let my vote stand where my sermons stand.
- **Elena** (sonnet): I have six units and the market is bare. Priya is mending hems for bread, so she's hungry. One unit costs me little, and it keeps a neighbor alive and gives me someone who owes me. Gideon is standing right here, and I'm saying nothing to him yet.

Result: 20 of 20 alive, 1 crimes.
